Java Programming

NO TUITION or fees! - FULLY FUNDED!

Tuition funded by the U.S. Department of Labor

Short-term training to learn a high demand skill set!

Training begins in March 2015!

12 week class - Mon Wed Fri (12:00 pm to 5:00 pm)

This workshop reviews programming concepts in general and the Java language in particular. It focuses on general problem solving techniques including flowcharts and algorithms and uses programming language to teach programming concepts such as variables, object-orientation, loops, input/output, etc. The student will gain an understanding of general-purpose problem-solving techniques, of general programming concepts and the Java language which is exceptionally useful for employers seeking computer support techs to assist with web development, IT support with Java based applications or programs, mobile platform development, and electronics.

The workshop runs approximately 12 weeks with 245 hours (180 hours in class and 45 hours of out-of-class/independent study) and is focused on concepts, language development and application of Java in a variety of settings. The instructor is fluent in Java and has a professional history of programming. Computer Support Specialists with Java concentration may enter employment in computer support, but can advance into programming positions with additional training.

**** All applicants must pass a skills assessment (administered by Takoda Institute)
to be eligible for attendance in this workshop. ****

**Attend an Informational Session to learn about eligibility criteria
and receive the training program application:**

Every Monday at 2:00 pm:
South Minneapolis WorkForce Center - 777 East Lake Street
