Conditions:

RE-ROOF BUILDING W/60 MIL FULLY ADHERED EPDM MEMBRANE & INSTALL NEW SM FLASHING. **ReRoof with Tear-Off- No Structural Changes. Flashing of the junctions of the roof to vertical surfaces (chimneys, dormers, walls, etc.) IS required. New flashing must be used if the original flashing is damaged, deteriorated or missing. If one does not already exist; it is highly recommended that chimneys which penetrate a lower portion of a roof have a "cricket"-type structure built between the chimney and the upper portion of the roof to improve the effectiveness of flashing and counterflashing around the chimney for long-term weather-proofing. A "starter" for ice-damming and water-backup is required from the eaves to a point one (1) foot in from the exterior wall (2 feet if the roof slope is less than 4:12). The Building Code minimum, for a slope of 4:12 or more, is 1 layer of Type 15 felt and 1 layer of No. 40 coated roofing or coated glass base. Any of the self-sealing, self-adhering, patented membrane-type "starters" presently marketed are highly recommended! Contact the designated Building Inspector between 7:30-9:00am, (M-F) on or before the day that work is to start, to arrange for the required inspections. The roof structure, sheathing condition and the "starter" for ice-damming must be inspected. NOTE: Per Section 33.04 of the Legislative Code all exterior work must be completed within one year of permit issuance.

STRUCTURAL PLAN REVIEW, fb, 5/11/11: The following is a result of a telephone conversation with the contractor: 1) Braun is on board for the required testing and observations. The contractor will coordinate Braun's scope of work with the project designers and keep a record of Braun's reporting available on site for the DSI inspector's reference, 2) the contractor will oversee that an engineer is retained to specify the soil stabilization required for construction of the elevator pit and will have documentation of the engineer's involvement available on site, 3) BKBM stated that they will be performing two to three visits of their own. The contractor will keep BKBM informed as to progress of construction so the visits can be appropriately timed, and will oversee that DSI is copied to attn: Frank Berg, on BKBM's site visit reports, and 4) the contractor is to have a set of structural steel and steel roof deck shop drawings, both indicated as having been reviewed by BKBM, available on site for the DSI inspector's reference.
