

NEWS RELEASE

EMBARGOED UNTIL RELEASE AT 8:30 A.M. EST, WEDNESDAY, JANUARY 30, 2013

BEA 13-02

Lisa Mataloni: (202) 606-5304 (GDP) gdpniwd@bea.gov
Recorded message: (202) 606-5306

GROSS DOMESTIC PRODUCT: FOURTH QUARTER AND ANNUAL 2012 (ADVANCE ESTIMATE)

Real gross domestic product -- the output of goods and services produced by labor and property located in the United States -- decreased at an annual rate of 0.1 percent in the fourth quarter of 2012 (that is, from the third quarter to the fourth quarter), according to the "advance" estimate released by the Bureau of Economic Analysis. In the third quarter, real GDP increased 3.1 percent.

The Bureau emphasized that the fourth-quarter advance estimate released today is based on source data that are incomplete or subject to further revision by the source agency (see the box on page 4 and the "Comparisons of Revisions to GDP" on page 5). The "second" estimate for the fourth quarter, based on more complete data, will be released on February 28, 2013.

The decrease in real GDP in the fourth quarter primarily reflected negative contributions from private inventory investment, federal government spending, and exports that were partly offset by positive contributions from personal consumption expenditures (PCE), nonresidential fixed investment, and residential fixed investment. Imports, which are a subtraction in the calculation of GDP, decreased.

The downturn in real GDP in the fourth quarter primarily reflected downturns in private inventory investment, in federal government spending, in exports, and in state and local government spending that were partly offset by an upturn in nonresidential fixed investment, a larger decrease in imports, and an acceleration in PCE.

Final sales of computers added 0.15 percentage point to the fourth-quarter change in real GDP after adding 0.11 percentage point to the third-quarter change. Motor vehicle output added 0.04 percentage point to the fourth-quarter change in real GDP after subtracting 0.25 percentage point from the third-quarter change.

NOTE. Quarterly estimates are expressed at seasonally adjusted annual rates, unless otherwise specified. Quarter-to-quarter dollar changes are differences between these published estimates. Percent changes are calculated from unrounded data and are annualized. "Real" estimates are in chained (2005) dollars. Price indexes are chain-type measures.

This news release is available on [BEA's Web site](#) along with the [Technical Note](#) and [Highlights](#) related to this release.

The price index for gross domestic purchases, which measures prices paid by U.S. residents, increased 1.3 percent in the fourth quarter, compared with an increase of 1.4 percent in the third. Excluding food and energy prices, the price index for gross domestic purchases increased 1.1 percent in the fourth quarter, compared with an increase of 1.2 percent in the third.

Real personal consumption expenditures increased 2.2 percent in the fourth quarter, compared with an increase of 1.6 percent in the third. Durable goods increased 13.9 percent, compared with an increase of 8.9 percent. Nondurable goods increased 0.4 percent, compared with an increase of 1.2 percent. Services increased 0.9 percent, compared with an increase of 0.6 percent.

Real nonresidential fixed investment increased 8.4 percent in the fourth quarter, in contrast to a decrease of 1.8 percent in the third. Nonresidential structures decreased 1.1 percent; it was unchanged in the third quarter. Equipment and software increased 12.4 percent in the fourth quarter, in contrast to a decrease of 2.6 percent in the third. Real residential fixed investment increased 15.3 percent, compared with an increase of 13.5 percent.

Real exports of goods and services decreased 5.7 percent in the fourth quarter, in contrast to an increase of 1.9 percent in the third. Real imports of goods and services decreased 3.2 percent, compared with a decrease of 0.6 percent.

Real federal government consumption expenditures and gross investment decreased 15.0 percent in the fourth quarter, in contrast to an increase of 9.5 percent in the third. National defense decreased 22.2 percent, in contrast to an increase of 12.9 percent. Nondefense increased 1.4 percent, compared with an increase of 3.0 percent. Real state and local government consumption expenditures and gross investment decreased 0.7 percent, in contrast to an increase of 0.3 percent.

The change in real private inventories subtracted 1.27 percentage points from the fourth-quarter change in real GDP after adding 0.73 percentage point to the third-quarter change. Private businesses increased inventories \$20.0 billion in the fourth quarter, following increases of \$60.3 billion in the third and \$41.4 billion in the second.

Real final sales of domestic product -- GDP less change in private inventories -- increased 1.1 percent in the fourth quarter, compared with an increase of 2.4 percent in the third.

Gross domestic purchases

Real gross domestic purchases -- purchases by U.S. residents of goods and services wherever produced -- increased 0.1 percent in the fourth quarter, compared with an increase of 2.6 percent in the third.

Disposition of personal income

Current-dollar personal income increased \$256.2 billion (7.9 percent) in the fourth quarter, compared with an increase of \$72.7 billion (2.2 percent) in the third. The acceleration in personal income primarily reflected a sharp acceleration in personal dividend income, an upturn in personal

interest income, and an acceleration in wage and salary disbursements. The sharp acceleration in personal dividend income reflected accelerated and special dividends that were paid by many companies in the fourth quarter in anticipation of changes in individual income tax rates. The upturn in personal interest income primarily reflected an upturn in interest rates for Treasury Inflation Protected Securities. The acceleration in wages and salaries reflected the pattern of monthly Bureau of Labor Statistics employment, hours, and earnings data for the fourth quarter, as well as a judgmental estimate of accelerated compensation in the form of bonus payments and other irregular pay in the fourth quarter.

Personal current taxes increased \$21.0 billion in the fourth quarter, compared with an increase of \$10.0 billion in the third.

Disposable personal income increased \$235.2 billion (8.1 percent) in the fourth quarter, compared with an increase of \$62.7 billion (2.1 percent) in the third. Real disposable personal income increased 6.8 percent, compared with an increase of 0.5 percent.

Personal outlays increased \$95.0 billion (3.3 percent) in the fourth quarter, compared with an increase of \$88.6 billion (3.1 percent) in the third. Personal saving -- disposable personal income less personal outlays -- was \$570.0 billion in the fourth quarter, compared with \$429.8 billion in the third. The personal saving rate -- personal saving as a percentage of disposable personal income -- was 4.7 percent in the fourth quarter, compared with 3.6 percent in the third. For a comparison of personal saving in BEA's national income and product accounts with personal saving in the Federal Reserve Board's flow of funds accounts and data on changes in net worth, go to www.bea.gov/national/nipaweb/Nipa-Frb.asp.

Current-dollar GDP

Current-dollar GDP -- the market value of the nation's output of goods and services -- increased 0.5 percent, or \$18.0 billion, in the fourth quarter to a level of \$15,829.0 billion. In the third quarter, current-dollar GDP increased 5.9 percent, or \$225.4 billion.

2012 GDP

Real GDP increased 2.2 percent in 2012 (that is, from the 2011 annual level to the 2012 annual level), compared with an increase of 1.8 percent in 2011.

The increase in real GDP in 2012 primarily reflected positive contributions from personal consumption expenditures (PCE), nonresidential fixed investment, exports, residential fixed investment, and private inventory investment that were partly offset by negative contributions from federal government spending and from state and local government spending. Imports, which are a subtraction in the calculation of GDP, increased.

The acceleration in real GDP in 2012 primarily reflected a deceleration in imports, upturns in residential fixed investment and in private inventory investment, and smaller decreases in state and local government spending and in federal government spending that were partly offset by decelerations in PCE, exports, and nonresidential fixed investment.

The price index for gross domestic purchases increased 1.7 percent in 2012, compared with an increase of 2.5 percent in 2011.

Current-dollar GDP increased 4.0 percent, or \$600.3 billion, in 2012, compared with an increase of 4.0 percent, or \$576.8 billion, in 2011.

During 2012 (that is, measured from the fourth quarter of 2011 to the fourth quarter of 2012) real GDP increased 1.5 percent. Real GDP increased 2.0 percent during 2011. The price index for gross domestic purchases increased 1.5 percent during 2012, compared with an increase of 2.5 percent during 2011.

Information on the assumptions used for unavailable source data is provided in a technical note that is posted with the news release on BEA's Web site. Within a few days after the release, a detailed "Key Source Data and Assumptions" file is posted on the Web site. In the middle of each month, an analysis of the current quarterly estimate of GDP and related series is made available on the Web site; click on *Survey of Current Business*, "GDP and the Economy." For information on revisions, see "[Revisions to GDP, GDI, and Their Major Components](#)."

BEA's national, international, regional, and industry estimates; the *Survey of Current Business*; and BEA news releases are available without charge on BEA's Web site at www.bea.gov. By visiting the site, you can also subscribe to receive free e-mail summaries of BEA releases and announcements.

Gross Domestic Product

Advance.....	January 30	April 26	July 31	October 30
Second.....	February 28	May 30	August 29	November 26
Third.....	March 28	June 26	September 26	December 20

Corporate Profits

Preliminary...	May 30	August 29	November 26
Revised.....	March 28	June 26	September 26	December 20

Comparisons of Revisions to GDP

Quarterly estimates of GDP are released on the following schedule: "Advance" estimates, based on source data that are incomplete or subject to further revision by the source agency, are released near the end of the first month after the end of the quarter; as more detailed and more comprehensive data become available, "second" and "third" estimates are released near the end of the second and third months, respectively. The "latest" estimates reflect the results of both annual and comprehensive revisions.

Annual revisions, which generally cover the quarters of the 3 most recent calendar years, are usually carried out each summer and incorporate newly available major annual source data. Comprehensive (or benchmark) revisions are carried out at about 5-year intervals and incorporate major periodic source data, as well as improvements in concepts and methods that update the accounts to portray more accurately the evolving U.S. economy.

The table below shows comparisons of the revisions between quarterly percent changes of current-dollar and real GDP for the different vintages of the estimates. From the advance estimate to the second estimate (one month later), the average revision to real GDP without regard to sign is 0.5 percentage point, while from the advance estimate to the third estimate (two months later), it is 0.6 percentage point. From the advance estimate to the latest estimate, the average revision without regard to sign is 1.3 percentage points. The average revision (with regard to sign) from the advance estimate to the latest estimate is 0.2 percentage point, which is larger than the average revisions from the advance estimate to the second or to the third estimates. The larger average revisions to the latest estimate reflect the fact that comprehensive revisions include major improvements, such as the incorporation of BEA's latest benchmark input-output accounts. The quarterly estimates correctly indicate the direction of change of real GDP 97 percent of the time, correctly indicate whether GDP is accelerating or decelerating 72 percent of the time, and correctly indicate whether real GDP growth is above, near, or below trend growth more than four-fifths of the time.

Rewvisions Between Quarterly Percent Changes of GDP: Vintage Comparisons
[Annual rates]

Vintages compared	Average	Average without regard to sign	Standard deviation of revisions without regard to sign
<u>Current-dollar GDP</u>			
Advance to second....	0.2	0.6	0.4
Advance to third.....	.1	.7	.4
Second to third.....	.0	.3	.2
Advance to latest.....	.3	1.2	1.0

Note. Users are cautioned that particularly for components that exhibit rapid change in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series. For accurate estimates of the contributions to percent changes in real gross domestic product, use table 2.

See "Explanatory Note" at the end of the tables.

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

2. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households. Percentage changes for these series are included in the addenda to table 8 and appendix table A.

See "Explanatory Note" at the end of the tables.

1. For some components of final sales of computers, includes computer parts.

2. Farm output less intermediate goods and services purchased.

3. Consists of GDP less gross value added of farm, of households and institutions, and of general government.

4. Gross domestic income deflated by the implicit price deflator for gross domestic product.

5. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

6. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

See "Explanatory Note" at the end of the tables.

Explanatory Note: NIPA Measures of Quantities and Prices

Current-dollar GDP is a measure of the market value of goods, services, and structures produced in the economy in a particular period. Changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year -- at present, the year 2005 -- equal to 100.

Annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from two adjacent years. (Quarterly changes in quantities and prices are calculated using a Fisher formula that incorporates weights from two adjacent quarters; quarterly indexes are adjusted for consistency to the annual indexes before percent changes are calculated.) For example, the 2007-08 annual percent change in real GDP uses prices for 2007 and 2008 as weights, and the 2007-08 annual percent change in GDP prices uses quantities for 2007 and 2008 as weights. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. Percent changes in Fisher indexes are not affected by the choice of reference year. (BEA also publishes a measure of the price level known as the implicit price deflator (IPD), which is calculated as the ratio of the current-dollar value to the corresponding chained-dollar value, multiplied by 100. The values of the IPD are very close to the values of the corresponding "chain-type" price index.)

Index numbers of quantity and price indexes for GDP and its major components are presented in this release in tables 5 and 6. Percent changes from the preceding period are presented in tables 1, 4, 7, 8, and appendix table A. Contributions by major components to the percent change in real GDP are presented in table 2.

Measures of real GDP and its major components are also presented in dollar-denominated form, designated "chained (2005) dollar estimates." For most series, these estimates, which are presented in table 3, are computed by multiplying the current-dollar value in 2005 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2005 and if real output for this component increased 10 percent in 2006, then the chained (2005) dollar value of this component in 2006 would be \$110 (= \$100 x 110 / 100). Percent changes calculated from chained-dollar estimates and from chain-type quantity indexes are the same; any differences will be small and due to rounding.

Chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate). This is because the relative prices used as weights for any period other than the reference year differ from those of the reference year. A measure of the extent of such differences is provided by a "residual" line, which indicates the difference between GDP (or other major aggregate) and the sum of the most detailed components in the table. For periods close to the reference year, when there usually has not been much change in the relative prices that are used as weights, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. Thus, the contributions to percent change shown in table 2 provide a better measure of the composition of GDP growth. In particular, for components for which relative prices are changing rapidly, calculation of contributions using chained-dollar estimates may be misleading even just a few years from the reference year.
