### COVID-19 Confirmed and Probable Cases by Onset\* Week

\*When onset date is unavailable, specimen collection date, date of death, or date reported is used instead.

\*\*Probable cases are antigen positive tests received since August 1, 2020.

December 15, 2020

Data through week ending 12/12/2020

**Table 1. Confirmed COVID-19 Cases and Deaths**

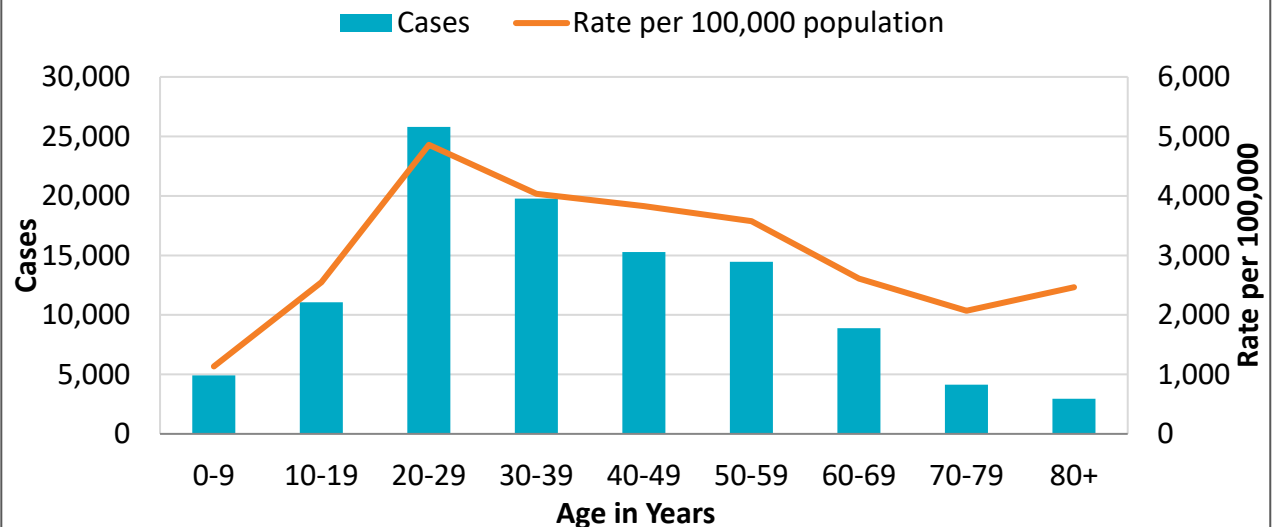

Summary of San Diego County Confirmed COVID-19 Cases and Deaths			
<b>Confirmed cases</b>	107,372	<b>Deaths</b>	1,162
<b>Hospitalizations</b>	5,139 (5%)	<b>Underlying Conditions</b>	1,115 (96%)
<b>Illness onset date range*</b>	2/14/2020-12/12/2020	<b>Death date range</b>	3/21/2020-12/11/2020
<b>Median age</b>	35 years	<b>Median age</b>	77 years
<b>Age range</b>	0-107 years	<b>Age range</b>	23-102 years
<b>Male</b>	51,924 (49%)	<b>Male</b>	669 (58%)
<b>Female</b>	55,001 (51%)	<b>Female</b>	493 (42%)
<b>Healthcare workers</b>	6,647 (6%)	<b>Case Fatality Ratio</b>	1.1%
Summary of Non-County Resident COVID-19 Cases			
<b>Confirmed cases</b>	8,594	<b>Hospitalizations</b>	634 (7%)

\*When onset date is unavailable, specimen collection date, date of death, or date reported is used instead.

Note: percentage hospitalized and healthcare workers are calculated based on the total number of cases; information may be unknown in some cases.

### Demographic Summary of Confirmed COVID-19 Cases

**Figure 2. Confirmed COVID-19 Cases by Age Group  
San Diego County Residents, N=107,372**

December 15, 2020

Data through week ending 12/12/2020

Data through week ending 12/12/2020

### Confirmed COVID-19 Cases by Geography

**Figure 10. Cumulative COVID-19 Rates by Zip Code of Residence, San Diego County (Countywide Rate = 3,203 per 100,000 Population)**

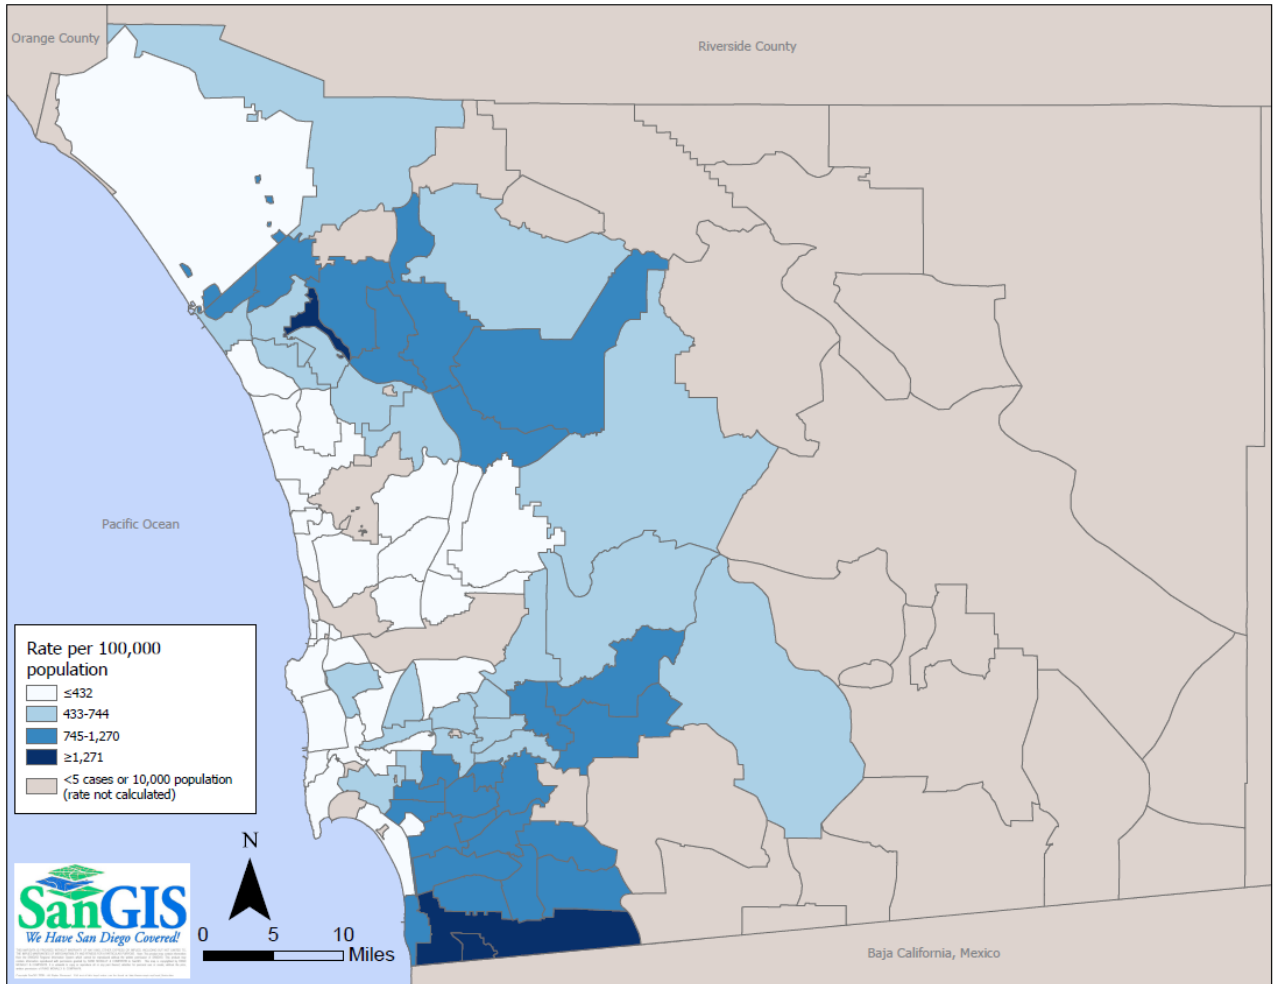

Rates calculated using 2019 population estimates from the San Diego Association of Governments. Rates not calculated for counts under 5 cases or populations less than 10,000. Zip code is zip code of residence, which may not be location of exposure. Case [counts and rates](#) for each zip code are updated routinely on the County of San Diego COVID-19 website.

December 15, 2020

Data through week ending 12/12/2020

### Confirmed COVID-19 Cases by Geography (continued)

**Figure 11. COVID-19 Rates by Zip Code of Residence, 11/29/2020-12/12/2020, San Diego County (Countywide Rate = 786 per 100,000 Population)**

Rates calculated using 2019 population estimates from the San Diego Association of Governments. Rates not calculated for counts under 5 cases or populations less than 10,000. Zip code is zip code of residence, which may not be location of exposure. Case [counts and rates](#) for each zip code are updated routinely on the County of San Diego COVID-19 website.

December 15, 2020

Data through week ending 12/12/2020

### Confirmed COVID-19 Hospitalizations by Age and Week

**Figure 12. COVID-19 Hospitalizations by Age Group and Week of Hospital Admission, San Diego County Residents, N=5,139\***

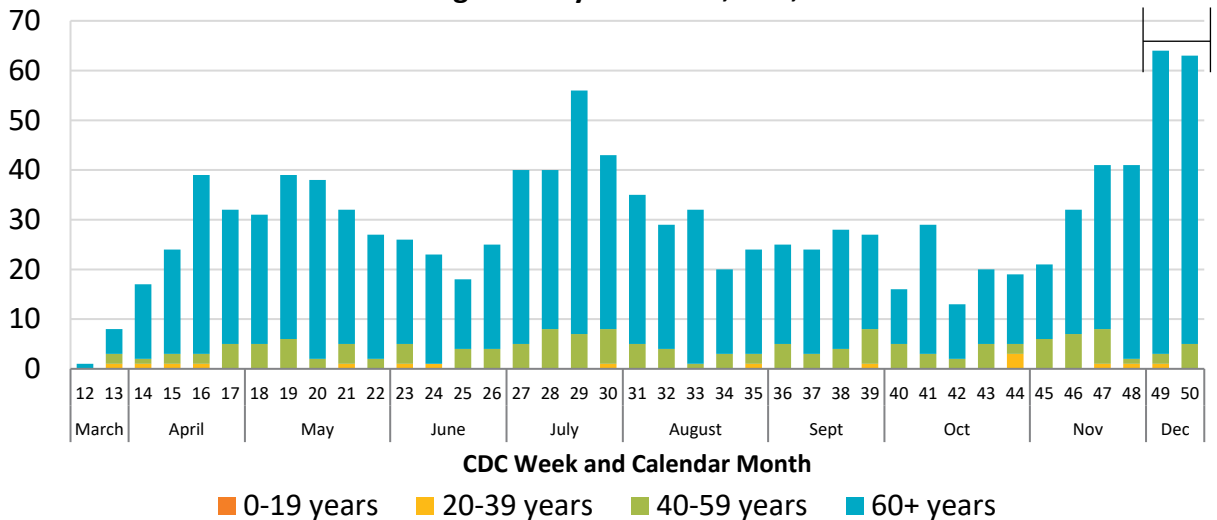

\*Admit date and age are unknown for some hospitalizations.

### Summary of COVID-19-associated Deaths

**Figure 13. COVID-19 Deaths by Week of Death San Diego County Residents, N=1,162**

Deaths that occurred during this time may not yet be registered

December 15, 2020

Data through week ending 12/12/2020

### Summary of COVID-19-associated Deaths (continued)

**Figure 14. Confirmed COVID-19 Cases and Case Fatality Rate  
San Diego County Residents  
(All Age Case Fatality Rate=1.1%)**

**Figure 15. Common Underlying Conditions, COVID-associated Deaths**

Persons may have more than one underlying condition. These data are abstracted from death certificates and available medical records and may not reflect a complete list of underlying conditions for each person.

December 15, 2020

Data through week ending 12/12/2020

### COVID-19 Potential Exposure Settings

**Table 2. COVID-19 Potential Exposure Settings, San Diego County Residents**

Confirmed COVID-19 Case Summary		Last 2 Weeks (11/29 – 12/12)		Cumulative (6/5 – 12/12)	
<b>Total Positive Cases</b>		26,339		99,133	
<b>Number Interviewed</b>		8,272		63,461	
Selected Exposures among those with Completed Interviews		Count	%	Count	%
<b>Potential Community Exposure Settings<sup>a</sup></b>					
At least one potential community exposure setting <sup>b</sup>					
		3,693	44.6%	29,458	46.4%
	Bars and Restaurants	609	7.4%	5,852	9.2%
	Casinos	68	0.8%	589	0.9%
	Group Gatherings	300	3.6%	2,921	4.6%
	Gyms	18	0.2%	262	0.4%
	Hair Salons or Barbers	171	2.1%	1,545	2.4%
	Places of Worship	177	2.1%	1,329	2.1%
	Protests	0	0.0%	47	0.1%
	Retail locations	802	9.7%	5,754	9.1%
	Workplaces <sup>c</sup>	2,766	33.4%	20,754	32.7%
No potential community exposure setting reported		4,579	55.4%	34,003	53.6%
<b>Average number of community settings visited</b>		1.4		1.5	
<b>Range of community settings visited</b>		1-11		1-24	
<b>Household Exposures<sup>d</sup></b>					
		3,216	38.9%	22,025	34.7%
<b>Any On-site Education-related Exposures</b>					
	Childcare/Preschools	87	1.1%	525	0.8%
	K-12 schools	273	3.3%	1,191	1.9%
	Colleges/Universities	81	1.0%	719	1.1%
<b>Any Travel-related Exposures</b>					
	Travel within the United States	789	9.5%	6,332	10.0%
	Travel to Mexico	460	5.6%	4,093	6.4%
	Travel to Another International Location	5	0.1%	100	0.2%

<sup>a</sup> Potential community exposure settings are defined as indoor or outdoor locations in which cases came within 6 feet of anyone who was not a household member for at least 15 minutes during the 2-14 days prior to symptom onset, even if the case wore a mask or facial covering. Potential exposure settings are places case-patients visited during their exposure period, not confirmed sources of infection. Persons may have visited more than one location.

<sup>b</sup> Effective 11/24/2020, travel exposures are excluded from community exposure settings.

<sup>c</sup> Workplaces may include other community settings (e.g., bar/restaurant, hair salon, retail).

<sup>d</sup> Persons with household exposures reported having close contact with someone in their household with laboratory-confirmed COVID-19, though this was not independently verified. Household exposures may have occurred outside the 2-14 days prior to symptom onset.

December 15, 2020

Data through week ending 12/12/2020

### Emergency Department Data

**Figure 16. Percent of Emergency Department Visit Chief Complaints for ILI, Respiratory Symptoms, Fever, or COVID-like Illness\* by Week, San Diego County**

Categories are not mutually exclusive. \*COVID-like Illness includes fever and cough, shortness of breath, or difficulty breathing OR coronavirus diagnostic codes.

**Figure 17. Percent of Emergency Department Visit Chief Complaints for ILI, Respiratory Symptoms, Fever, or COVID-like Illness\* by Week, San Diego County Among Patients Age 60 Years or Older**

Categories are not mutually exclusive. \*COVID-like Illness includes fever and cough, shortness of breath, or difficulty breathing OR coronavirus diagnostic codes.

December 15, 2020

Data through week ending 12/12/2020

### COVID-19 Laboratory Test Positivity Rate

**Figure 18. COVID-19 Testing Volume and Positivity by Week of Specimen Collection, San Diego County**

Includes PCR tests performed by COSD Public Health, hospital, and reference laboratories and reported via Electronic Laboratory Reporting (ELR) and line lists. Excludes invalid, indeterminate, and unsatisfactory results.

### COVID-19 Watch Data Sources

The following sources of data are used to produce this report:

- **COVID-19 case reports:** Medical providers and laboratories report individual cases of PCR-confirmed COVID-19 via fax or electronic laboratory reporting (ELR) to the County of San Diego Epidemiology Unit.
- **COVID-19 deaths:** The County of San Diego requests that all deaths related to COVID-19 be reported for surveillance purposes. Medical facilities may report these deaths directly to the Epidemiology Unit or they may be identified by the Office of Vital Records through death certificate registration. The Epidemiology Unit compiles the data, and only reports deaths that can be verified by a death certificate.
- **Emergency Department Chief Complaint Data:** Electronic emergency department data are reported to the Epidemiology Unit daily. The number of respiratory chief complaints and the number of total emergency department visits are used to calculate percentages for all respiratory-related visits and visits specific to influenza-like illness, fever, and COVID.
- **COVID-19 outbreaks:**
  - Skilled Nursing Facilities: at least one case of laboratory-confirmed COVID-19 in a resident.
  - Non-SNF Institution/Congregate Settings: at least one case of laboratory-confirmed COVID-19 in the setting of  $\geq 2$  cases of acute illness compatible with COVID-19 in residents or staff members of residential congregate settings with onset within a 14-day period.
  - Community settings: three or more laboratory-confirmed COVID-19 cases in different households in a cluster of 2 or more acute illnesses compatible with COVID-19\*\* with onset within a 14-day period.
- **SANDAG population estimates, vintage 2019:** Rates are calculated using 2019 population estimates from the San Diego Association of Governments. Rates are not calculated for counts under five cases.

The purpose of the weekly **COVID-19 Watch** is to summarize current COVID-19 surveillance in San Diego County. **Data are preliminary and may change due to delayed reporting and additional information obtained during investigations.**
