Lake Okeechobee Elevation	14.55 ft. (0.42 ft. Below Normal)									
Keetch-Byram Drought Index	215 (+6) on a scale from 0 (very moist) to 800 (very dry)									

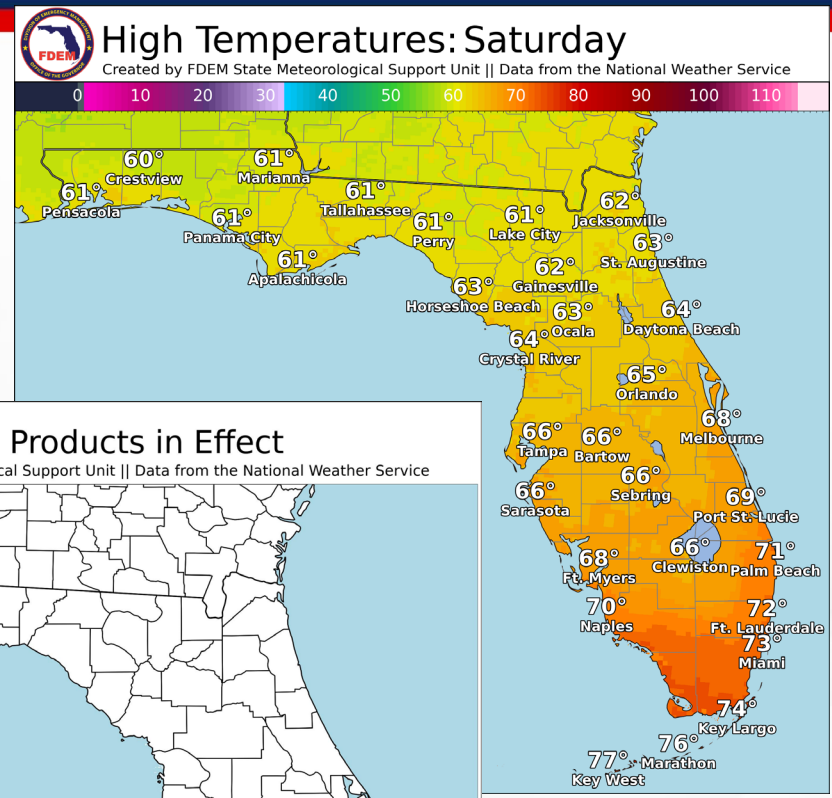

Meteorology Summary

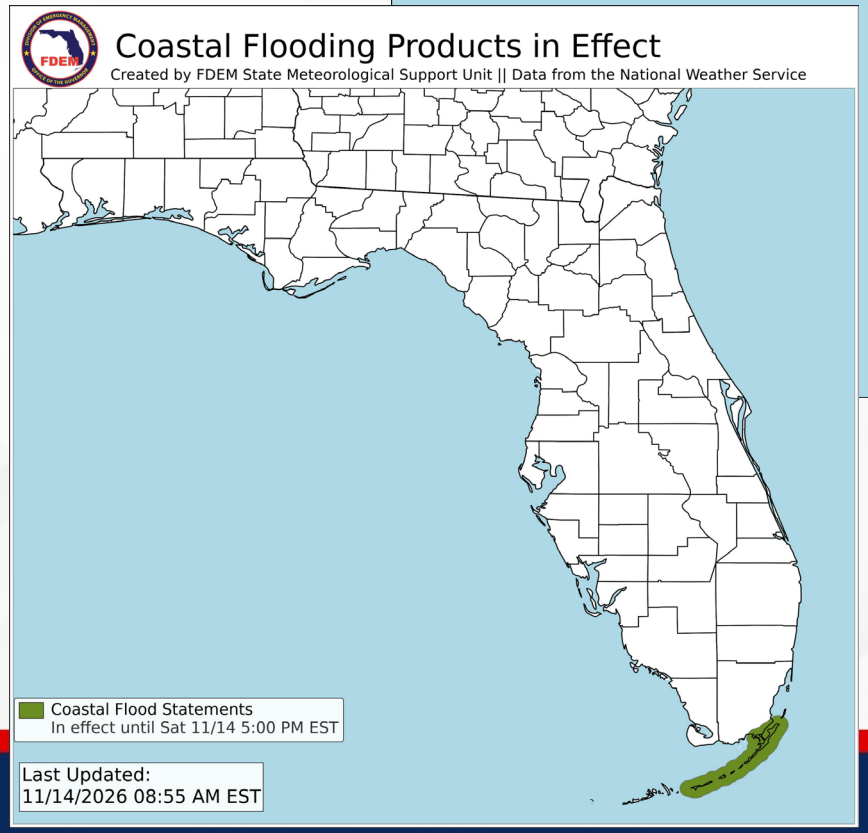

Statewide Overview, Next 24 Hours:

The state will remain dry and cold today. High temperatures will struggle to reach the 60s across North Florida due to the influx of colder air from the north. Central Florida will remain in the mid 60s and low 70s are forecast for South Florida. Breezy conditions will lead to cooler feels like temperatures throughout the afternoon.

Low temperatures drop significantly tonight, with lows bottoming out in the **middle 30s** across the Panhandle and Big Bend Region. A **Frost Advisory** has been issued tonight for much of the inland Panhandle and Big Bend Region. Coastal areas across North Florida will be warmer in the **low 40s**. North of Lake Okeechobee temperatures will drop into the **upper 40s**, whereas south of the lake temperatures will fall into the **middle 50s**. Coastal areas along both coastlines will be warmer than inland areas.

Offshore winds of 15-20 kts are expected today increasing wave heights resulting in **Small Craft Advisories** along the East Coast. **Flood Warnings** remain in effect along the St. Johns and the Peace River until further notice. A **Coastal Flood Statement** is in effect for minor flooding along the middle and upper Florida Keys.

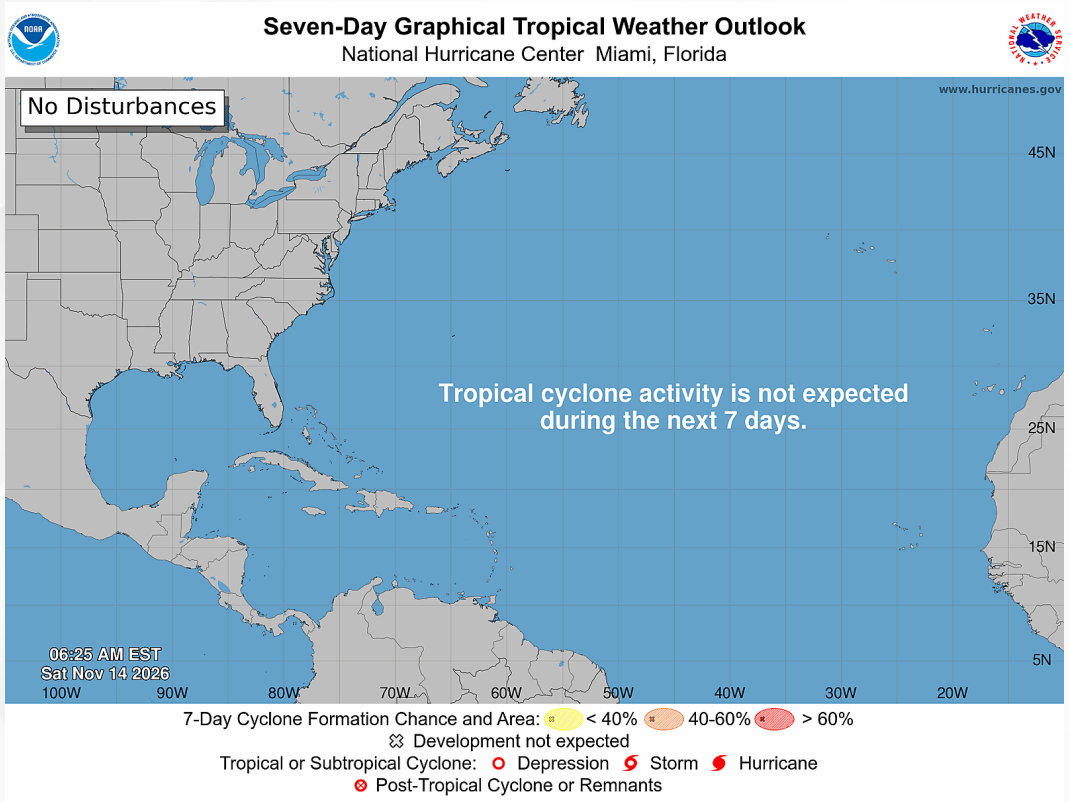

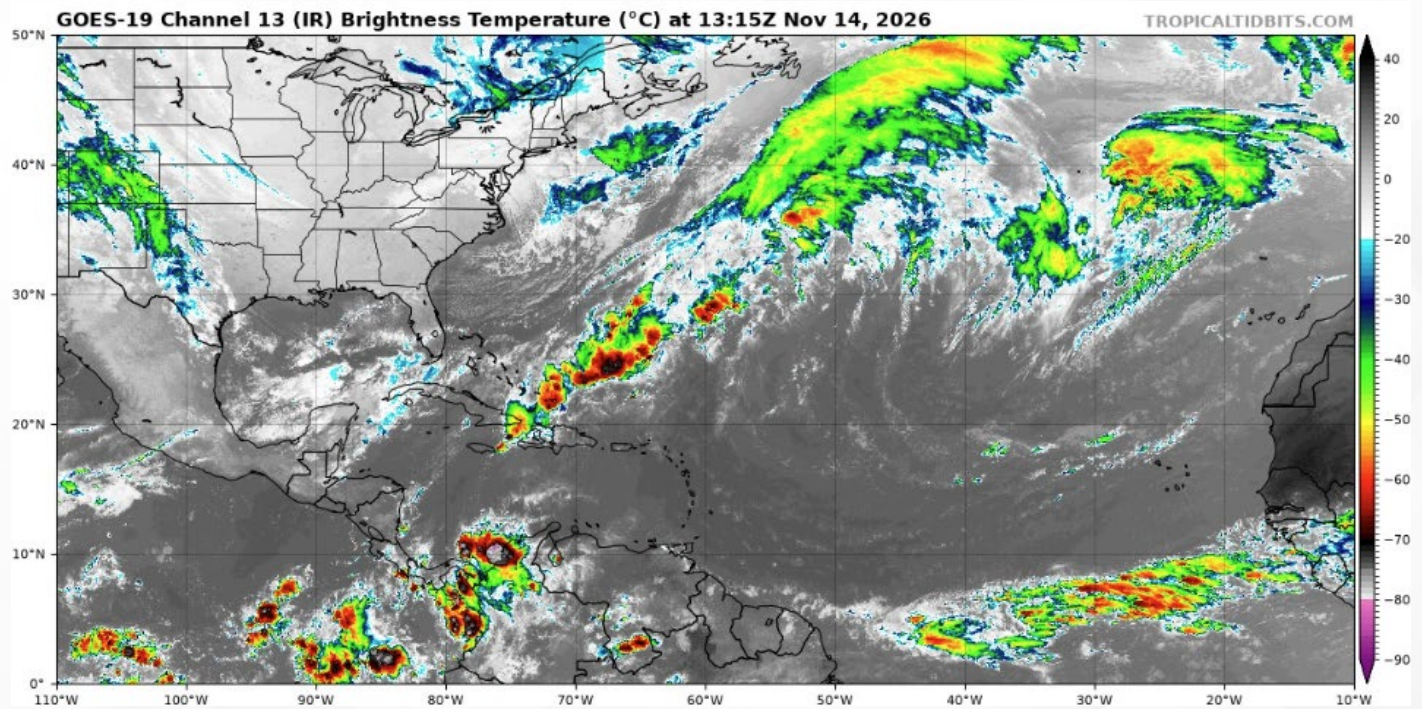

Tropical Weather

For the latest on the tropics, please visit the National Hurricane Center (NHC) at www.hurricanes.gov.

Tropical Cyclone Development is ***NOT EXPECTED*** over the next 7 days.

Coastal Hazards & Hydrology

Rip Currents: A **High Risk for Rip Currents** is outlooked for The Western Peninsula Beaches. A **Rip Current Statement** is in effect until 7 pm EST south of Pasco County. **Moderate Risk for Rip Currents** is outlooked for the Central Panhandle Beaches and Space Coast Beaches. A low risk for rip currents is outlooked across the remainder of the state. For the latest Rip Current Outlook, visit www.weather.gov/beach.

Marine Hazards: A **Small Craft Advisory** has been issued for all East Coast marine waters today. A fresh breeze of 15-20 kts are expected for the near shore Atlantic waters with higher gusts further offshore. Wave heights remain moderate today, across the Central East Coast FL north of Miami Dade County, at **3-4'**. The Western Peninsula beaches have wave heights that will increase today again to **3-5'**.

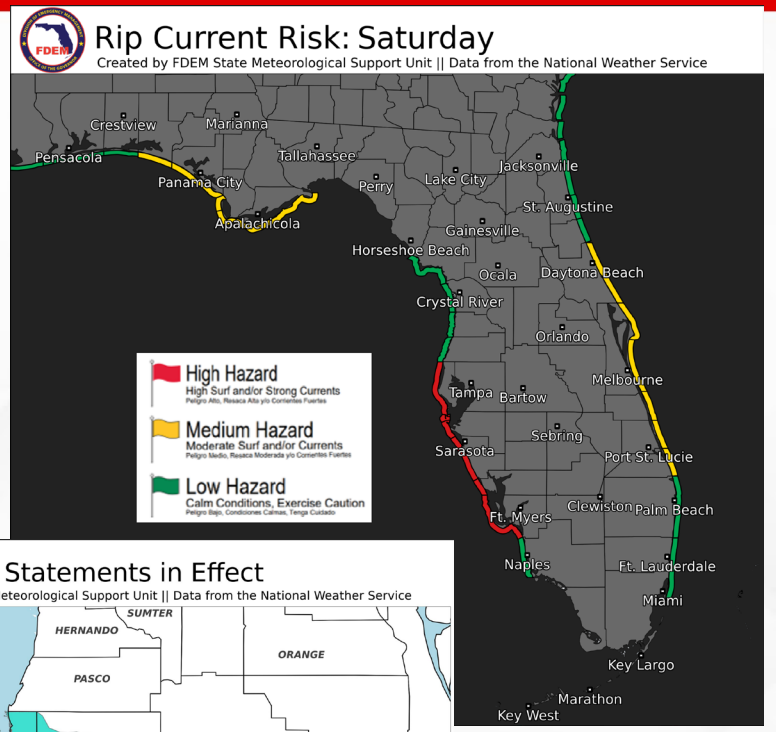

Red Tide: Red tide was observed at background concentrations in Pinellas, Sarasota, Escambia, and Collier counties. **Low concentrations** were observed in Walton County. **Medium concentrations** were observed in Bay County. **High concentrations** were observed in Gulf County (11/13).

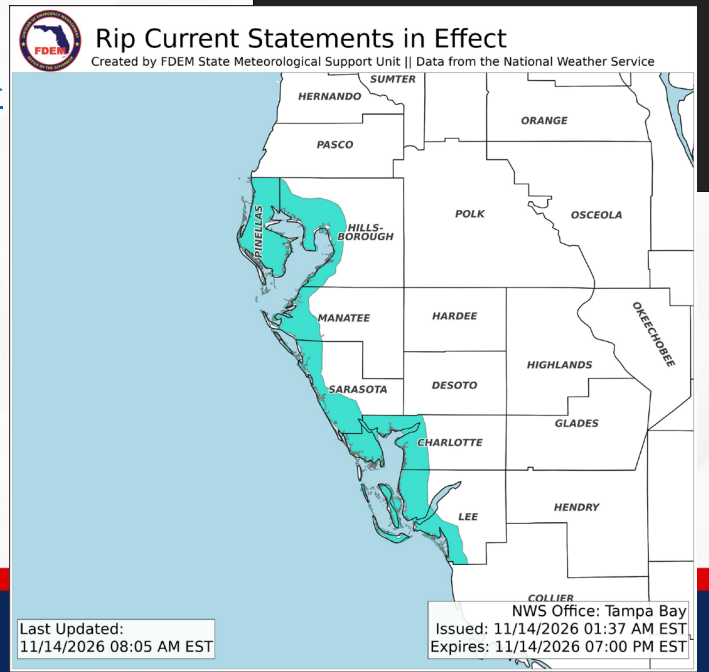

Coastal Flooding: A Coastal Flood Statement has been issued for the middle and upper Florida Keys for minor flooding.

Flash Flooding: There is no organized risk of Flash Flooding today. For more information, visit the Weather Prediction Center.

Riverine Flooding: Numerous locations along the St. Johns River basin are expected to reach **moderate to major flood stage** in the coming weeks. The St Johns River near Cocoa is in **Major Flood Stage** and is expected to stay in **Major Flood Stage** through the week. The St Johns River above Lake Harney is in **Moderate Flood Stage** and is expected to continue to rise over the next week. Given the slow-moving nature of the St. Johns River, our flood wave will reach the St. Johns River near Sanford and the St. Johns River near Deland beyond the available forecast time range. The St. Johns River near Sanford is expected to reach **Minor** flood stage when this occurs. Finally, the St Johns River at Astor has fallen into **Minor Flood Stage** this morning but is expected to stay there for the coming weeks. For information, visit the River Forecast Center.

Lake Okeechobee's average elevation is 14.55 feet, which is 0.42 feet below normal for this time of year and within the normal operating band.

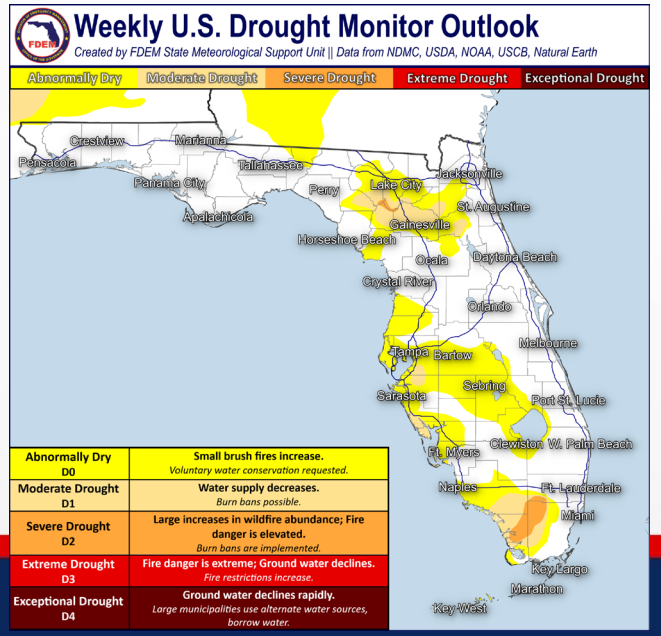

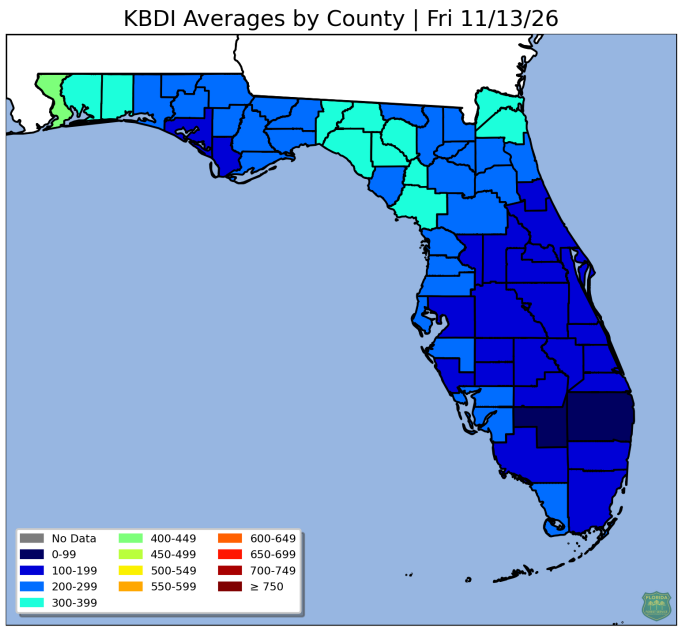

Drought & Fire Weather

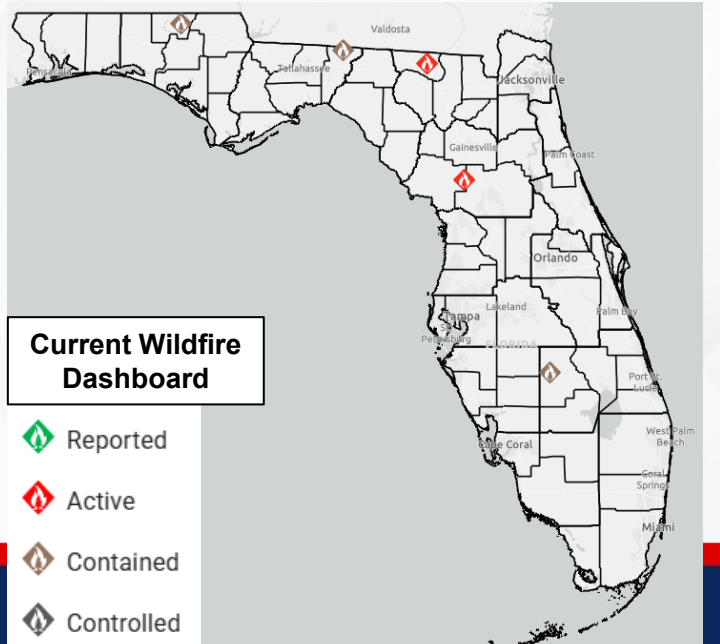

Fire Weather: No fire weather concerns are forecast today. Minimum relative humidities will remain mainly above critical thresholds alongside light winds and saturated soils. According to the Florida Forest Service, there are 5 active wildfires burning approximately 2062 acres.

Drought (11/12/26): Modest improvements were made in Northeast Florida this week due to rainfall and higher river levels. 1 category level improvements in South Florida led to a smaller area of moderate drought (level 1 of 4) in the Everglades between Monroe and Miami-Dade County. The severe drought (level 2 of 4) remains the same across South Florida. Along the Florida West Coast, small 1 category drought improvements through the Tampa metro and Fort Myers, resulted in a smaller area of moderate drought (level 1 of 4) near Port Charlotte and Cape Coral. There was a large 1 category improvement in the Santa Fe River Basin this week. The area of moderate drought (level 1 of 4) decreased to the areas around the Suwannee River. A small area of in severe drought (level 2 of 4) remains in North Central Florida. Much of the state is not in a drought designation this week. Only about 1% of the state remains in severe drought (level 2 of 4). About 67% of the state has no drought designation.

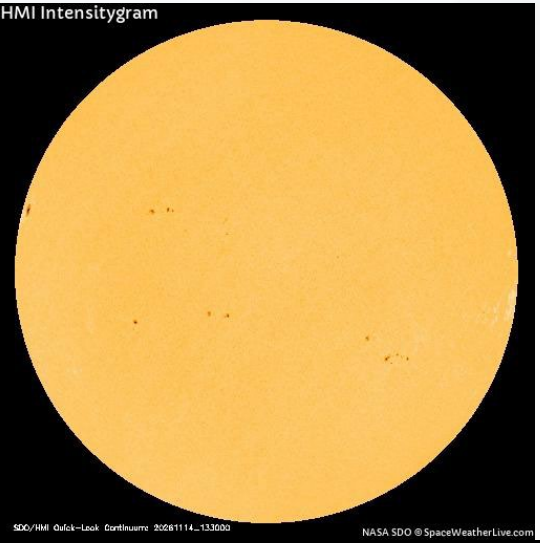

The Keetch-Byram Drought Index average for Florida on Tuesday was **215** **(+6)** on a scale from 0 (very wet) to 800 (very dry).There are **0 out of 67** Florida counties that have an average KBDI above 500 (drought/increased fire danger).

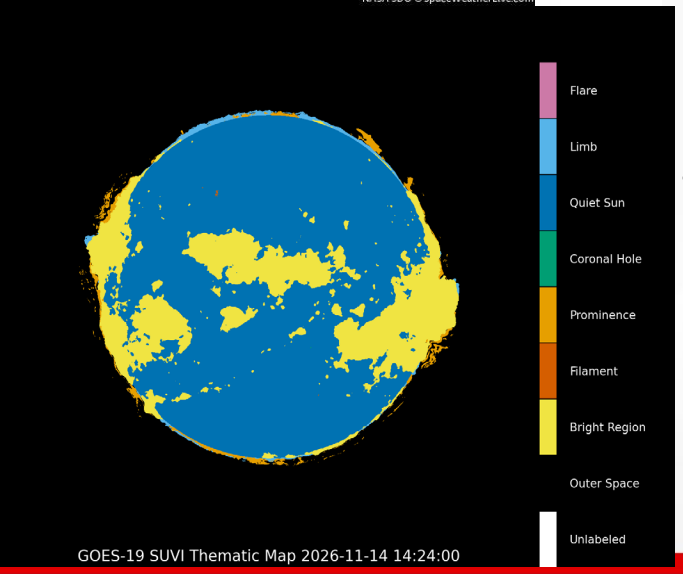

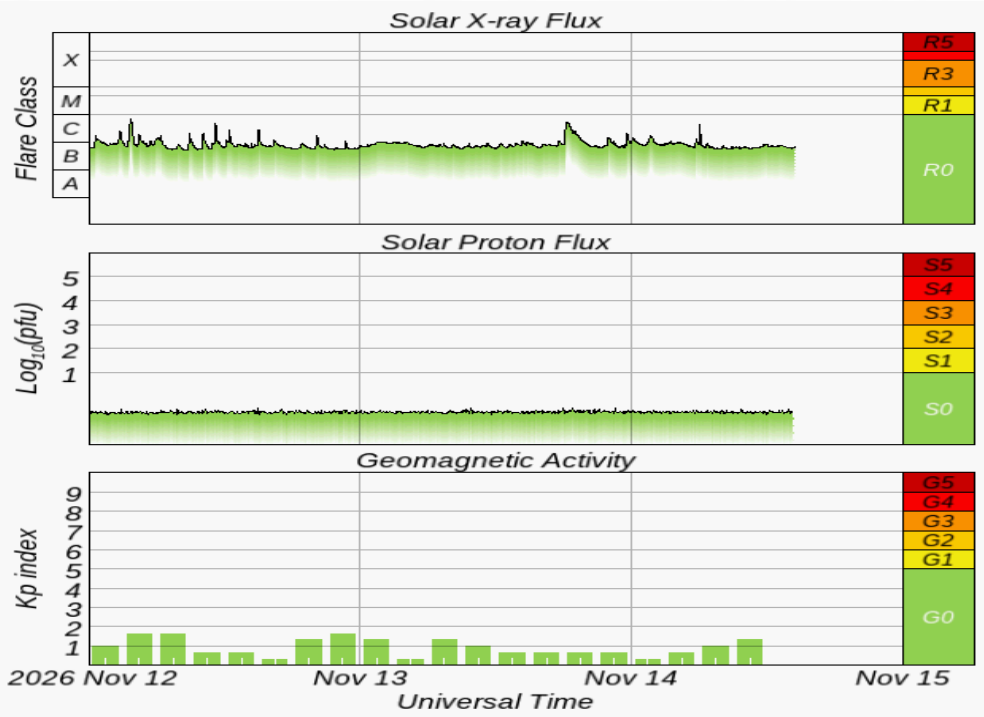

Space Weather

Current Sunspots

Solar Flare Risk	Active Watches & Warnings	Past 24 hours
M-class: 20%	Geomagnetic Storm: None	C5 Solar Flare
X-class: 5%	Radiation Storm: None	Radio: None

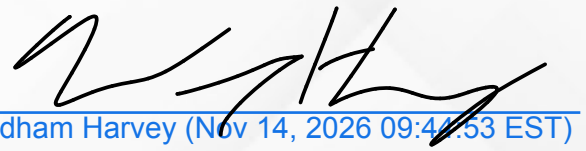

48-Hour Geomagnetic Forecast	
11/14	11/15
Max Kp= 2 (G0)	Max Kp= 2 (G0)
Chance of minor activity = 10% severe activity = 1%	Chance of minor activity = 1% severe activity = 1%

Space Weather: Solar activity is expected to be low with a chance for M-class flares (R1-R2, Minor-Moderate) over 14-16 Nov. Nominal conditions are expected on 14-15 Nov. Mostly quiet geomagnetic conditions are expected today before beginning to increase again 16 Nov. The overall space weather threat to Florida is low.
