

# OVERCOMING DATA

FOR DATA NOVICES

## ABOUT THE SERIES

Data comes at you in all different shapes, sizes, and meanings. How do you know what the data really means? Or even what questions to ask about the data? Join the Office of Student Assessment to dive deeply into data and think about how that data can be used to make educational decisions. This four-session interactive workshop series is intended to strengthen your understanding of assessment data and your use of data to support student learning.

We know finding time to fit development sessions into your busy schedule can be challenging. We will schedule the sessions based on your feedback once the participant list is defined. We will host one meeting per month with a few pre-work activities in between. PGPs will be offered for participants that complete all sessions.

### **Interpretations and Support from ISRs and Engaging with Parents**

*Learn how to interpret scale scores, use Lexiles/Quantiles, and better understand proficiency levels.*

### **Aggregated Reports and Revisiting Year-Long Curriculum and Progressions-Part 1**

*Learn how to use the standards reports to support a review of your curriculum map.*

### **Aggregated Reports and Revisiting Year-Long Curriculum and Progressions-Part 2**

*Learn how to use aggregate reports to support curricular change.*

### **Applying Analysis to Interim and Formative Reporting**

*Learn how to compare ILEARN results to other provided assessments.*

## TIME COMMITMENT

The data workshops are a series of four interactive sessions that build on one another. Registration is for the course of four, not for specific modules. This is not for the faint of heart. There will be interaction, brainwork, and homework. But you will walk away knowing more about what your students know and what to do about it. **10 PGPs will be reward to those who complete the workshop in full.**
