

GIS Specialist Job Description and Responsibilities:

The GIS Specialist would report to the GIS Department Head and be responsible for the daily management of 1-4 projects depending upon their size and complexity. Currently our projects consist of public utility mapping (sanitary, storm and water) along with environmental, transportation and private sector clients. The GIS Department serves as a supporting department for HRC's various civil and environmental engineering clients. The Specialist would be involved in daily coordination with our field staff performing GPS and field data collection and inspection, would be responsible for the data management, analysis, quality control, map production and coordinating with the rest of the GIS Department staff. Strong written and verbal communications skills and being an interactive team member are required.

The Specialist should be very experienced in ArcGIS desktop software and be able to exchange data between CAD, field data collectors and other common data formats. We are also looking for someone experienced with programming languages such as Python, HTML5 and other customizing tools for GIS. Experience with relational database management software, ArcServer, Collector and other web-based mapping is also a plus. HRC is an Esri Business Partner.

HRC is an equal opportunity employer always searching for talented and creative individuals to further our capabilities and capacity to be of service to our clients. We offer an excellent compensation/benefit package combined with a friendly, challenging team-orientated professional work environment. Please submit your cover letter and resume to employment@hrc-engr.com
