### **Michigan receives \$2.25 million grant to combat opioid misuse, abuse**

LANSING, Mich. – To help prevent overdose deaths related prescription opioids, the Michigan Department of Health and Human Services (MDHHS) will receive \$2.25 million over a three-year period from the Centers for Disease Control and Prevention (CDC) as part of the *Prescription Drug Overdose: Data-Driven Prevention Initiative (DDPI)*.

The funding will support Michigan’s ongoing efforts to advance and evaluate state-level prevention of opioid misuse, abuse, and overdose efforts to reduce the number of prescription drug overdose deaths in the state. Using data to address the number of opioid-related overdoses builds on the CDC-funded [\*Prescription Drug Overdose: Prevention for States\*](#) (PfS) program, and supports the Michigan Prescription Drug and Opioid Abuse Task Force recommendations.

“Addiction is an epidemic that is impacting families all across our state and country,” said Lt. Gov. Brian Calley, chair of the Prescription Drug and Opioid Task Force. “Michigan is taking action by focusing on community prevention and early detection, and working to connect people with better treatment options. This federal grant will help in our efforts to provide more second chances for Michiganders.”

DDPI funding will further Michigan’s efforts to:

- improve data collection and analysis around opioid misuse, abuse and overdose;
- develop a strategy to combat the epidemic; and,
- work with communities to develop larger, more comprehensive opioid overdose prevention programs.

From 1999 to 2014, Michigan saw a four-fold increase in unintentional fatal drug poisonings, and the state was ranked 10<sup>th</sup> in the nation in per capita prescribing rates of opioid pain relievers in 2012.

“This is an excellent opportunity to expand coordination of efforts and resources to address the complex problem of opioid misuse and abuse in our state,” said Dr. Eden Wells, MDHHS chief medical executive. “These funds will support efforts with state and community partners to develop a statewide strategic plan that will help Michigan communities build capacity at the local level.”

Michigan’s participation in the DDPI is a vital part of CDC’s ongoing efforts to identify and enhance evidence-based programs across the nation making progress in the fight against the opioid overdose epidemic. DDPI provides resources and support to advance and evaluate state-level interventions for preventing prescription drug misuse, abuse, and overdose.

Additional states awarded funding include: *Alabama, Alaska, Arkansas, Georgia, Hawaii, Idaho,*

– MORE –

*Kansas, Louisiana, Minnesota, Montana, New Jersey, South Dakota, and Washington, DC.* Over the next three years, selected states will receive DDPI awards averaging \$430,000 a year.
