

FREE INVASIVE PLANT TRAINING

MINNESOTA'S TACTICAL INVASIVE PLANT MANAGEMENT PLAN

Natural resource professionals who work with invasive species (particularly noxious weeds) are invited to learn about the state's new Tactical Invasive Plant Management Plan.

Participants will begin with a self-paced online course to learn about a selection of invasive plants in Minnesota, new research on distribution and management prioritization.

Then, select one or more regional workshops to discuss priority invasive plants identified for that region, as well as virtually network with other natural resource managers.
