

Protect Your Child from COVID-19 (Audio Described) Transcript

[Brightly colored band aids twirl into frame. Text onscreen reads, "Protect your child from COVID-19"]

The COVID-19 Pfizer Vaccine is now available to children 5 to 11 years old.

[The band aids slide to the center of the frame and are emphasized.]

The Centers for Disease Control and Prevention recommends children who are able, get vaccinated.

[An illustration of a teacher and class of young children appears.]

Even children can get COVID-19, and the vaccine helps provide protection to keep children healthy.

[The scene changes, text appears next to illustrations of band aids and is read by the narrator.]

COVID-19 vaccine is safe, free, and effective for children.

[The band aids shrink in size, indicating the dose for children is smaller.]

The Pfizer vaccine for children age 5-11 is a smaller dose of vaccine than the Pfizer vaccine for people age 12 and older.

The smaller dose is packaged differently, so you will want to go to a vaccine location that has this vaccine.

[A couple cradles the woman's pregnant belly. Text onscreen is read by the narrator.]

COVID-19 vaccine does not cause illness.

[A mother and father hug their son.]

COVID-19 vaccine protects families from COVID-19.

[A timeline shows how COVID-19 shots are safely spaced out. The timeline is described by the narrator.]

Your child will need two doses of COVID-19 vaccine to be fully protected.

Wait 3 weeks between getting the first and second dose.

Your child is fully protected two weeks after the second dose.

[A stethoscope appears next to onscreen text, "Talk to a health care provider if you have any questions about COVID-19.]

Talk to a health care provider if you have any questions.

[Stay Safe Minnesota Logo and text on screen, "the MDH hotline is also available if you have questions." The narrator reads the telephone number.]

And the MDH hotline is also available at 1-833-431-2053.

[Roll Up Your Sleeves, Minnesota logo on screen]
