

MULTI-TIERED SYSTEM OF SUPPORT

NC Department of Public Instruction

The Integrated Academic and Behavior Systems Division at NCDPI is pleased to provide an informative recorded webinar about the upcoming release of NCENSI (North Carolina Early Numeracy Skill Indicators). The release of these K-3 math measures is part of a larger project begun by NCDPI to ensure equitable access to **quality universal screening and progress-monitoring tools** across the state for **FREE and OPTIONAL** use.

NC has already committed, first through the implementation of Read to Achieve, to the importance of early identification and prevention activities that begin with valid and reliable screening and monitoring tools. To expand upon this important work, the first goal is to provide similar access for the area of early mathematics in grades kindergarten- 3rd grade. The recorded webinar and supporting materials (including directions for access) are included here and will also be archived at the MTSS wikispace. Please take particular note of the **dates for professional development** and **corresponding registration** information. *Access to the materials will be given after LEA attendance at this professional development.*
