

## NCSLA Fall 2020 Webinar Series

*We are in a new era of education because of what is going on in the world around us. As a result, educators must contend with two critical issues of our time: effective pedagogies for virtual teaching and meaningful ways to provide equity and social justice in our classrooms. To meet the needs these issues present to leaders in North Carolina, NCSLA is presenting four webinars this fall to provide professional learning opportunities on these topics. Two of the webinars will investigate the challenges inherent in distance learning and will present pedagogy to effectively meet those challenges. The other two webinars will take a hard look at ways in which equity and social justice can be addressed and incorporated into the classroom.*

Join us virtually and hear from top Science Educators in North Carolina sharing the ways and means to remote learning in a virtual classroom and addressing diversity and equity during distance learning.
