

Tivoli Water System – Supply ID 1302778 AFTER BOIL WATER NOTICE

Lift of Boil Water Notice Advisory for Feroe Ave

Loss of pressure in Water System.

Dear Residents / Customers:

This letter is to inform you that the system repairs have been completed and your water is now safe to use per the results of system coliform water sampling.

Samples were taken on 8/12, and on 8/13. Both samples came back absent of any coliform bacteria. These sample results can be made available upon request.

Please see below After Boil Water Notice instructions for further safety measures and information regarding flushing of faucets and appliances.

Instructions for Post-Boil-Water Order

What to do after a Boil Water Order is lifted?

Residents are advised to "flush" their water following the lifting of a boil order to clear plumbing of potentially contaminated water. Flushing your household and building water lines includes interior and exterior faucets; showers; water and ice dispensers; water treatment units, etc. Please use the following guidance:

Cold Water Faucets:

Run tap water until the water feels cold, one minute or more, before drinking, brushing teeth, or using for food preparation. If you have a single-lever faucet, set it to run the cold water first.

Hot Water Faucets:

To clear hot-water pipes and water heater of untreated water, flush the hot water line for a minimum of 15 minutes for a typical household 40-gallon hot-water tank, 30 minutes for an 80-gallon hot water tank or larger. Never use water from the "hot" faucet for drinking, cooking, or other internal consumption purposes until you have completed this flushing.

Dishwashers:

After flushing hot water pipes and water heater, run dishwasher empty one time.

Humidifiers:

Discard any water used in humidifiers, Continuous Positive Airway Pressure (CPAP), oral, medical, or health care devices, and rinse the device with clean water.

Food and Baby Formula:

Discard baby formula and other foods prepared with water on the day or days of the boil order. If unsure of the dates, contact your water department.

Refrigerator Water-Dispensing Machine:

Water dispensers from refrigerators should be flushed by at least one quart of water. If unsure of your dispenser's capacity, refer to manufacturer specifications.

Ice Cubes:

Automatic ice dispensers should be emptied of ice made during the boil water order and run through a 24-hour cycle, discarding the ice to assure purging of the icemaker water supply line. For medical, dental, and food-service establishments, please refer to the guidance from the Department of Public Health.

Due to the flushing of the lines by residents and the flushing of the hydrants, some customers may experience a lack of water pressure and/or discolored water. However, this is an expected result and does not pose an immediate health risk. Contact your local water department if you have any questions.
