Inventory Management System (IMS)

Dealer Release Notes

9.0.6 (Snapshot) Release

03/19/2026

Contents

Table 1: Revision Table

Version	Date	Description	Author
9.0.6 (Snapshot)	03/19/2026	**Impact Analysis by Area:** **View Inventory:** New Plate Status Filter Options to limit the number of plates displayed in the View Inventory screen. **Product Ordering:** Enhanced order tracking capabilities. **Reporting:** Improved reporting features for the Inventory Inquiry Report.	Michelle Arriaga
9.0.6	01/27/2026	**Impact Analysis by Area:** **Product Order:** Major focus: Duplicate order prevention, Approval/Denial workflows enhancements, and modifying the orders so that IMS no longer sends plate numbers to the distribution warehouse when orders are created. Instead, the distribution warehouse will send plate numbers when orders are shipped. **Inventory:** Focus: Receiving errors, search fixes, and quantity calculations **Reporting:** Enhancement to: Inventory Inquiry Report, Delete Inventory History Report, Dealer Inventory Export, Historical Orders and Allotment History Report. Dealers will be able to see the Inventory Inquiry Report and all reports have the option to export to Excel.	Michelle Arriaga

About the Release

These Release Notes contain information about new features, enhancements, and reported issues resolved in this release of the Information Management System (IMS).

IMS Overview

The IMS is a web-based application designed to manage license plate inventory and interfaces with the webDEALER application to provide dealers with a way to assign plates in ePLATE.
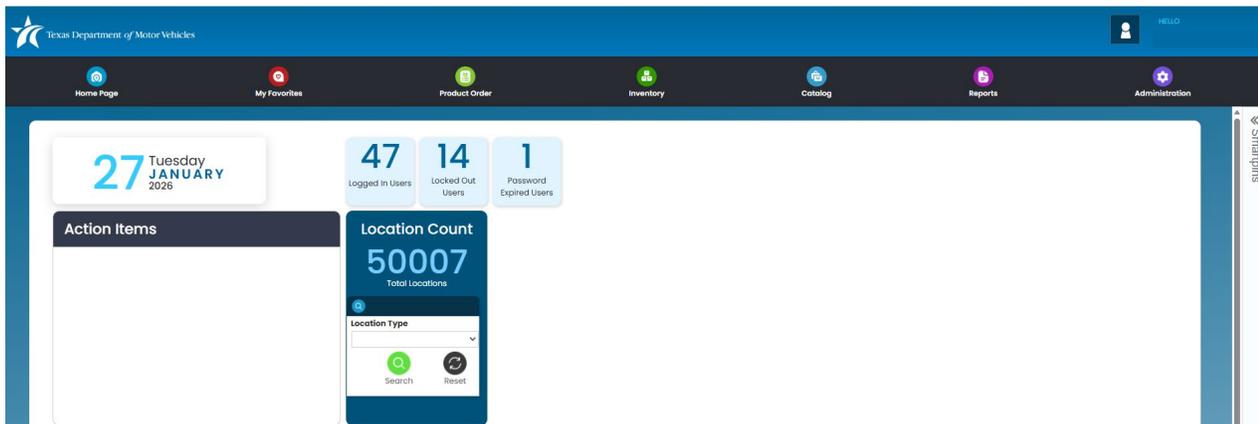

Summary of Enhancements

IMS Jira	Description
DMV-1511	A new Plate Status filter (Available, Unavailable, All) was added to help dealers more easily identify usable inventory and navigate the system more efficiently.
DMV-1637	Tracking numbers are now clickable, allowing users to quickly access real-time shipment updates.
DMV-1617 & DMV-1698	Reporting enhancements allow dealers to run Inventory Inquiry Reports at both the GDN and location level, filter by plate type, and export results to Excel. Improvements were also made to plate range grouping for better accuracy.

## Enhancements in Release 9.0.6 (Snapshot)

The following Enhancements displayed in this section for the 9.0.6 Release Notes improves the **Product Order** process, fixes errors received in certain scenarios related to **Inventory,** and releases **Reporting** functionality.

Impact Analysis by Area:

- **View Inventory:** Enhancements to default data loading and filtering capabilities.
- **Shipment Tracking:** Enhancements to the tracking number, providing access to real-time shipping status.
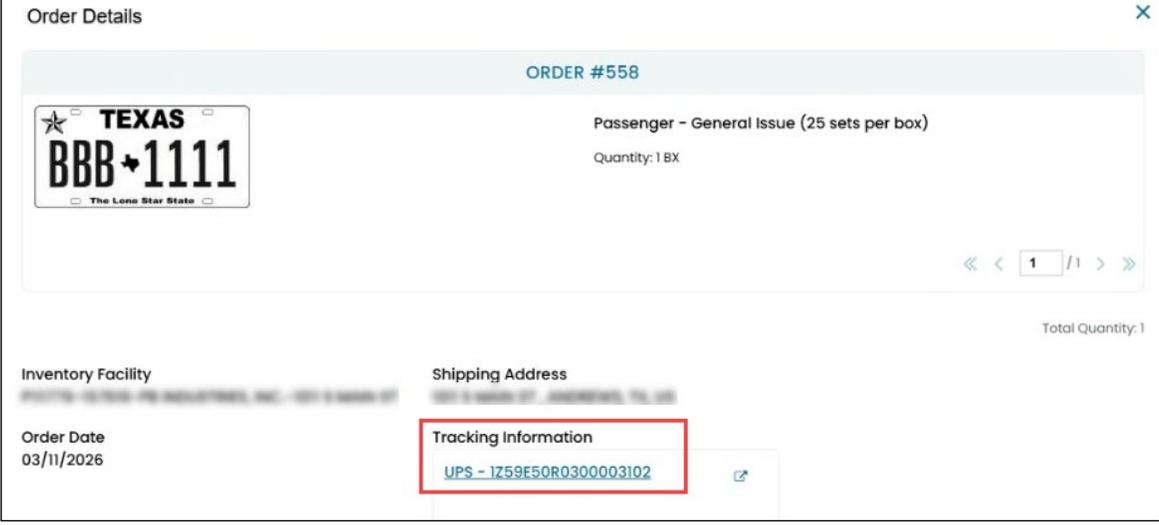

- **Reporting:** Enhancements to the Inventory Inquiry Report criteria and data display.

1.1 View Inventory Enhancements

DMV-1511	A new Plate Status filter (Available, Unavailable, All) was added to help dealers more easily identify usable inventory and navigate the system more efficiently.
	A new **Plate Status filter** on the **View Inventory** screen makes it easier to find usable inventory fast. The **In Stock** view now displays only **Available** items, with options to include **Unavailable** inventory or both **Available** + **Unavailable** inventory — giving you clearer visibility and better control in fewer clicks. **Plate Status Filter Options** **Available Only** — Displays ready to use inventory, in an Available status. **Unavailable Only** — Displays unusable inventory, in an Unavailable status (Assigned to vehicles or flagged as lost/missing, damaged or stolen). **All plates** — Displays plates in both Available and Unavailable statuses.
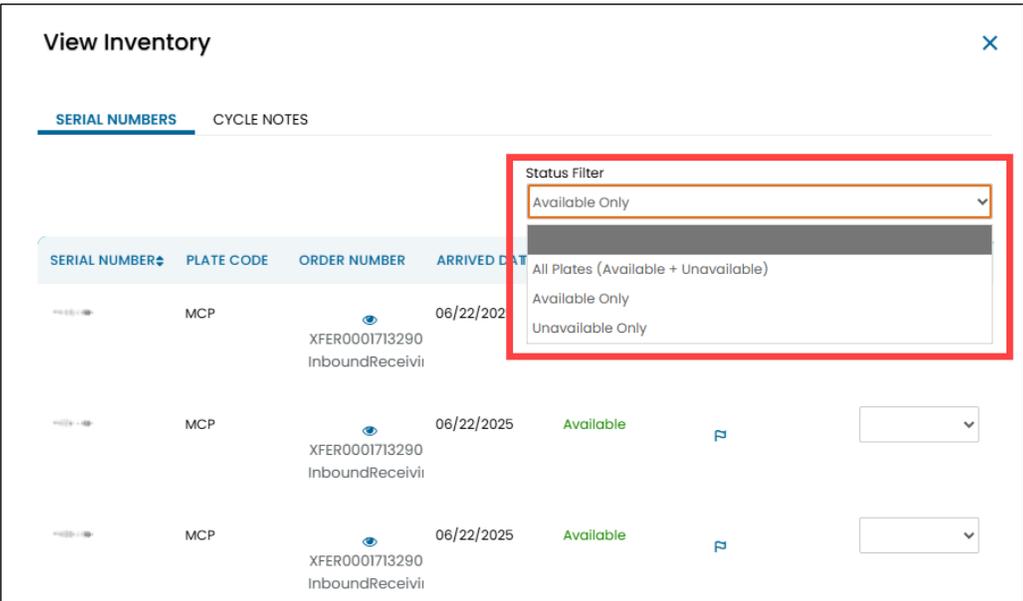

1.2 Shipment Tracking Enhancements

| DMV-1637	Tracking numbers are now clickable, allowing users to quickly access real-time shipment updates.
	The **tracking number** now appears in the **Order Details** screen, and links directly to the carrier's website—making it easy to view real-time shipment status and delivery details.

DMV-1637	Tracking numbers are now clickable, allowing users to quickly access real-time shipment updates.

1.3 Reporting Enhancements

DMV-1617 & DMV-1698	Reporting enhancements allow dealers to run Inventory Inquiry Reports at both the GDN and location level, filter by plate type, and export results to Excel. Improvements were also made to plate range grouping for better accuracy.
	Enhancements to the Inventory Inquiry Report includes: 1. You can now run reports at the **GDN level or by individual locations**, giving you the flexibility to view plate inventory across an entire GDN or drill down location by location. 2. Run a report by a specific plate type to get a filtered look at one or more specific plate types across a GDN or individual location. 3. Improvements to how sequential and non-sequential plate ranges are displayed in the report provide better accuracy with inventory tracking and counts.

DMV-1617 & DMV-1698	Reporting enhancements allow dealers to run Inventory Inquiry Reports at both the GDN and location level, filter by plate type, and export results to Excel. Improvements were also made to plate range grouping for better accuracy.
