Introduction

Overview. Statistics are powerful tools—in research, policymaking, program evaluation, and advocacy. They are used to frame the issues, monitor current circumstances and progress, judge the effectiveness of policies and programs, make projections about the future, and predict the costs of potential policy changes.

Statistics about the population with disabilities and about the government programs that serve people with disabilities—disability statistics—are often difficult to find. Numerous government agencies generate and publish disability statistics which are scattered and buried in documents and websites all across the federal government.

The *Annual Disability Statistics Compendium* is a publication of statistics on people with disabilities and government programs that serve the population with disabilities and is modeled after the *Statistical Abstracts of the United States*, published yearly by the U.S. Department of Commerce. The *Compendium* is designed to serve as a reference guide to government publications. At the bottom of each table, the source of data appearing in each table is presented. These referenced sources contain additional statistical and information about the way the underlying data were collected and the statistics were generated. Each year, the *Compendium* is updated to reflect the statistics published over the year, and new statistics are added each year, as new data sources and publications become available.

Topics. As in previous years, this—the fourth annual *Compendium*—provides state-level statistics and monthly time-trend statistics published by federal agencies. Topics covered in this year's *Compendium* include:

- population size,
- prevalence of disability,
- labor force participation,
- unemployment,
- employment,
- poverty,

- earnings from work,
- enrollment in education,
- educational attainment
- self-reported health status,
- health behaviors,
- health care coverage,
- Supplemental Security Income,
- Social Security Disability Insurance,
- special education
- veterans, and
- vocational rehabilitation.

New Topics. This year, the *Compendium* also contains statistics by detailed disability type in the newly-created Section 15. These statistics are based on the Census Bureau's Survey of Income and Program Participation (SIPP). Also see new tables with detailed disability type in Section 9 derived from Social Security Administration reports.

Additional Resources. A glossary is provided to assist in the interpretation of the statistics contained in the *Compendium*. In addition, assistance in interpreting statistics and locating additional statistics is available via our toll-free number, 866.538.9521, or by email, disability.statistics@unh.edu.

Section 1: Population and Prevalence

This section presents statistics on the United States resident population and projected population, as well as disability prevalence. The prevalence statistics describe disability prevalence by age and by disability type. The principal source of these statistics is the U.S. Census Bureau, specifically the American Community Survey.

Tables

Table 1.1: In 2011, the resident population in the United States was estimated to be 311,591,917 individuals, up from 304,374,846 individuals in 2008—a 2.3 percent increase. The state with the largest population in 2011 was California, with 37,691,912 individuals. The state with the smallest population in 2011 was Wyoming, with 568,158 individuals. The largest percentage increase in population from 2008 to 2011 was in Hawaii—a 6.5 percent increase, while the largest decrease in population was in Michigan—a 1.3 percent decrease.

Table 1.2: The projected 2030 resident population in the United States is 363,584,435 individuals—a projected 14.3 percent increase from 2011. The state with the largest projected population in 2030 is California, with 46,444,861 individuals. The largest projected percentage increase in population from 2011 to 2030 is in Arizona—a 39.5 percent increase, while the largest projected decrease in population was in the District of Columbia—a 42.6 percent decrease.

Table 1.3: In 2011, there were 310,241,024 individuals living in the community, 37,954,360 of which were individuals with disabilities—a prevalence rate of 12.2 percent. The state with the largest number of individuals with disabilities was California, with 3,749,792 individuals with disabilities, while the state with the smallest number of individuals with disabilities was Wyoming, with 63,853 individuals with disabilities. West Virginia had the highest

prevalence rate, 18.9 percent, while Utah had the lowest prevalence rate, 8.8 percent.

Table 1.4: In 2011, there were 20,281,148 individuals under five years old living in the community, 170,021 of which were individuals with disabilities—a prevalence rate of 0.8 percent. For this age range, Vermont had the highest prevalence rate, 2.1 percent, while North Dakota had the lowest prevalence rate, 0.2 percent.

Table 1.5: In 2011, there were 54,368,870 individuals ages five to 17 years living in the community, 2,848,678 of which were individuals with disabilities—a prevalence rate of 5.2 percent. For this age range, Maine had the highest prevalence rate, 8.2 percent, while North Dakota had the lowest prevalence rate, 3.2 percent.

Table 1.6: In 2011, there were 194,946,315 individuals ages 18 to 64 years living in the community, 19,988,156 of which were individuals with disabilities—a prevalence rate of 10.3 percent. For this age range, West Virginia had the highest prevalence rate, 17.3 percent, while New Jersey had the lowest prevalence rate, 7.5 percent.

Table 1.7: In 2011, there were 40,644,691 individuals ages 65 years and over living in the community, 14,947,505 of which were individuals with disabilities—a prevalence rate of 36.8 percent. For this age range, Mississippi had the highest prevalence rate, 46.2 percent, while Minnesota had the lowest prevalence rate, 32.0 percent.

Tables 1.8-1.13: In 2011, of the 194,946,315 individuals ages 18 to 64 years living in the community,

- 4,048,528 individuals (or 2.1 percent) had a hearing disability,
- 3,491,599 individuals (or 1.8 percent) had a vision disability,
- 8,388,281 individuals (or 4.3 percent) had a cognitive disability,
- 10,267,907 individuals (or 5.3 percent) had an ambulatory disability,

- 3,698,036 individuals (or 1.9 percent) had a self-care disability, and
- 7,104,312 individuals (or 3.6 percent) had an independent living disability.

Table 1.14: In 2010, there were 36,354,712 individuals with disabilities living in the community. In 2011, there were 37,954,360 individuals with disabilities living in the community, a 4.4 percent increase. The largest percentage increase in the population of individuals with disabilities from 2010 to 2011 was in Nevada, a 7.3 percent increase. Rhode Island had the largest decrease in the population of individuals with disabilities from 2010 to 2011, a 12.0 percent decrease.

Projections for July 1. These state projections were produced in correspondence with the United States interim projections released in March 2004. Projections in this table were developed for each of the 50 states and the District of Columbia by age and sex for the years 2000 to 2030, based on Census 2000 results.

Section 2: Employment

This section presents statistics on employment and full-time, year-round employment. For both categories of employment, data are presented concerning those with disabilities, those without disabilities, and the employment gap (difference in employment rate) between these two populations. The principal source of these statistics is the U.S. Census Bureau, specifically the American Community Survey.

Tables

Tables 2.1 and 2.2: In 2011, of the 19,988,156 individuals with disabilities ages 18 to 64 years living in the community, 6,521,860 individuals were employed—an employment rate of 32.6 percent. In contrast, of the 174,958,159 individuals without disabilities ages 18 to 64 years living in the community, 127,445,842 individuals were employed—an employment rate of 72.8 percent. The employment rate for people with disabilities was highest in North Dakota (49.8 percent) and lowest in the West Virginia (24.3 percent).

Table 2.3: In 2011, of the 4,048,528 individuals with hearing disabilities ages 18 to 64 years living in the community, 1,955,589 individuals were employed—an employment rate of 48.3 percent. The employment rate for people with hearing disabilities was highest in Wyoming (71.7 percent) and lowest in West Virginia (35.1 percent).

Table 2.4: In 2011, of the 3,491,599 individuals with vision disabilities ages 18 to 64 years living in the community, 1,259,143 individuals were employed—an employment rate of 36.1 percent. The employment rate for people with vision disabilities was highest in North Dakota (59.1 percent) and lowest in the District of Columbia (26.4 percent).

Table 2.5: In 2011, of the 8,388,281 individuals with cognitive disabilities ages 18 to 64 years living in the community, 1,882,966 individuals were employed—an employment rate of 22.4 percent. The employment rate for people with cognitive disabilities was highest in North

Dakota (37.6 percent) and lowest in the West Virginia (13.8 percent).

Table 2.6: In 2011, of the 10,267,907 individuals with ambulatory disabilities ages 18 to 64 years living in the community, 2,456,542 individuals were employed—an employment rate of 23.9 percent. The employment rate for people with ambulatory disabilities was highest in South Dakota (38.2 percent) and lowest in Kentucky and West Virginia (18.2 percent).

Table 2.7: In 2011, of the 3,698,036 individuals with self-care disabilities ages 18 to 64 years living in the community, 588,945 individuals were employed—an employment rate of 15.9 percent. The employment rate for people with ambulatory disabilities was highest in Montana (28.6 percent) and lowest in West Virginia (10.3 percent).

Table 2.8: In 2011, of the 7,104,312 individuals with independent living disabilities ages 18 to 64 years living in the community, 1,095,329 individuals were employed—an employment rate of 15.4 percent. The employment rate for people with independent living disabilities was highest in South Dakota (31.5 percent) and lowest in West Virginia (9.7 percent).

Table 2.9: In 2011, the employment rate for individuals with disabilities ages 18 to 64 years living in the community was 32.6 percent, while the employment rate for individuals without disabilities ages 18 to 64 years living in the community was 72.8 percent—an employment gap of 40.2 percentage points. The employment gap was greatest in Maine (46.7 percentage points) and smallest in Wyoming (32.3 percentage points).

Table 2.10: In 2011, the employment gap between individuals with and without disabilities ages 18 to 64 years living in the community was 40.2 percent, while the comparable measure was 39.4 in 2010.

Tables 2.11 and 2.12: In 2011, of the 21,343,320 individuals with disabilities ages 16 to 64 years living in the community, 4,003,341 individuals were employed full-time, year-round (FTYR)—a rate of 18.8 percent. In contrast, of

the 185,843,492 individuals without disabilities ages 16 to 64 years living in the community, 91,307,695 individuals were employed FTYR—a rate of 49.1 percent. The FTYR employment rate for people with disabilities was highest in North Dakota (32.2 percent) and lowest in Kentucky (14.9 percent).

Table 2.13: In 2011, the FTYR employment rate for individuals with disabilities ages 18 to 64 years living in the community was 18.8 percent, while the FTYR employment rate for individuals without disabilities ages 18 to 64 years living in the community was 49.1 percent—a gap of 30.4 percentage points. The FTYR employment gap was greatest in the District of Columbia (37.4 percentage points) and smallest in Utah (23.2 percentage points).

Section 3: Time Trends

This section presents monthly and annual time trends for employment and poverty statistics. There are two sources used in this section. Monthly time trends are from the Bureau of Labor Statistics Data Retrieval System and are based on data from the Current Population Survey-Basic Monthly Survey (CPS-BMS). Annual time trends were produced by the authors using data from the Current Population Survey-Annual Social and Economic Supplement (CPS-ASEC), which is fielded annually in March.

Tables

Table 3.1: In August 2012, there were 15,357,000 non-institutionalized civilians with disabilities, and of these individuals 4,154,000 were employed, for an employment-to-population ratio of 27.0 percent. The employment-to-population ratio has slightly increased since August 2011 but is higher than its lowest value of 25.2 percent in February 2012. By comparison, in August 2012, there were 186,127,000 non-institutionalized civilians without disabilities, 131,192,000 of which were employed, for an employment-to-population ratio of 70.5 percent.

Table 3.2: In August 2012, there were 15,357,000 non-institutionalized civilians with disabilities, and of these individuals, 4,897,000 participated in the labor force (by either working or looking for work), for a labor force participation rate of 32.0 percent. This labor force participation rate has declined from a labor force participation rate of 34.0 in June 2010. By comparison, in August 2012, there were 186,127,000 non-institutionalized civilians without disabilities, 142,654,000 of which participated in the labor force, for a labor force participation rate of 76.6 percent.

Table 3.3: In August 2012, of the 4,897,000 non-institutionalized civilians with disabilities participating in the labor force, 742,000 were not working but actively looking for work, for an unemployment rate of 15.2 percent. This is lower than the unemployment rate in June 2009 (15.6

percent) but lower than the peak unemployment rate in June 2010 of 18.6 percent. By comparison, in August 2011, of the 142,654,000 non-institutionalized civilians without disabilities participating in the labor force, 11,462,000 were not working but actively looking for work, for an unemployment rate of 8.0 percent.

Table 3.4: In 2012, of the 201,096,000 non-institutionalized civilians ages 16 to 64, 7.9 percent (15,959,000) had a work limitation, 7.6 percent (15,300,000) had a broad disability, and 11.2 percent (22,536,000) had work limitation and/or a broad disability. These percentages have remained quite similar for the last four years.

Table 3.5: In 2012, the labor force participation rate among non-institutionalized civilians ages 16 to 64 was 18.6 percent for persons with a work limitation and 77.5 percent for people without a work limitation. The labor force participation rate was 30.7 percent for persons with a broad disability as compared to 76.3 percent for persons without a broad disability. The labor force participation rate was 29.3 percent for persons with a work limitation and/or a broad disability as compared to 78.3 for persons without a work limitation and/or a broad disability.

Table 3.6: In 2012, the employment rate among non-institutionalized civilians ages 16 to 64 was 14.5 percent for persons with a work limitation and 71.0 percent for people without a work limitation. The employment rate was 25.6 percent for persons with a broad disability as compared to 69.8 percent for persons without a broad disability. The employment rate was 24.0 percent for persons with a work limitation and/or a broad disability as compared to 71.8 for persons without a work limitation and/or a broad disability.

Table 3.7: In 2011, the labor market attachment rate among non-institutionalized civilians ages 16 to 64 was 19.9 percent for persons with a work limitation and 75.9 percent for people without a work limitation. The labor market attachment rate was 31.7 percent for persons with a broad disability as compared to 74.7 percent for persons without a broad disability.

The labor market attachment rate was 30.3 percent for persons with a work limitation and/or a broad disability as compared to 76.6 for persons without a work limitation and/or a broad disability.

Table 3.8: In 2011, the full-time, year-round employment rate among non-institutionalized civilians ages 16 to 64 was 5.5 percent for persons with a work limitation and 51.8 percent for people without a work limitation. The full-time, year-round employment rate was 15.8 percent for persons with a broad disability as compared to 50.8 percent for persons without a broad disability. The full-time, year-round employment rate was 13.3 percent for persons with a work limitation and/or a broad disability as compared to 52.5 for persons without a work limitation and/or a broad disability.

Table 3.9: In 2011, the poverty rate among non-institutionalized civilians ages 16 to 64 was 31.0 percent for persons with a work limitation and 12.4 percent for people without a work limitation. The poverty rate was 28.8 percent for persons with a broad disability as compared to 12.7 percent for persons without a broad disability. The poverty rate was 28.6 percent for persons with a work limitation and/or a broad disability as compared to 12.0 for persons without a work limitation and/or a broad disability.

Table 3.1: Monthly Employment of Civilians Ages 16 to 64 by Disability Status: June 2010 through September 2012

Month / Year	People with a Disability [1]			People with No Disability [1]			Disability as % of No Disability
	Total	Emp'd	% [2]	Total	Emp'd	% [2]	
Jun 2010	14,636	4,169	28.5	184,387	129,538	70.3	40.5
Jul 2010	14,446	3,968	27.5	184,736	130,025	70.4	39.0

Section 4: Poverty

This section presents statistics on poverty. The statistics describe the number and percentage of people with and without disabilities who experience poverty, as well as the gap between the poverty rates of people with and without disabilities. The principal source of these statistics is the U.S. Census Bureau, specifically the American Community Survey.

Tables

Tables 4.1 and 4.2: In 2011, of the 19,899,755 individuals with disabilities ages 18 to 64 years who were living in the community, 5,697,022 individuals lived in poverty—a poverty rate of 28.6 percent. In contrast, of the 172,544,106 individuals without disabilities ages 18 to 64 years living in the community, 23,581,154 individuals lived in poverty—a poverty rate of 13.7 percent. The poverty rate for people with disabilities was highest in the District of Columbia (39.4 percent) and lowest in New Hampshire (20.2 percent).

Table 4.3: In 2011, the poverty rate of individuals with disabilities ages 18 to 64 years living in the community was 28.6 percent, while the poverty rate of individuals without disabilities ages 16 to 64 years living in the community was 13.7 percent—a poverty gap of 15.0 percentage points. The poverty gap was smallest in Nevada (9.7 percentage points) and greatest in the District of Columbia (24.7 percentage points).

Table 4.4: In 2010, the poverty gap between individuals with and without disabilities ages 18 to 64 years living in the community was 14.5 percent. In 2011, the poverty gap between individuals with and without disabilities ages 18 to 64 years living in the community was 15.0 percent, a 0.5 percentage point increase. The largest percentage point increase in the poverty gap from 2010 to 2011 was in Alaska, a 5.0 percentage point increase, while the largest decrease in the poverty gap was in South Dakota, an 8.2 percentage point decrease.

Section 5: Earnings

This section presents statistics on earnings. The statistics describe the earnings of individuals with and without disabilities in the past 12 months, as well as the earnings gap between these two populations. The principal source of these statistics is the U.S. Census Bureau, specifically the American Community Survey.

Tables

Table 5.1: In 2011, for the individuals with disabilities ages 16 years and over living in the community that had earnings from work, median earnings were \$19,735. In contrast, among individuals without disabilities ages 16 years and over living in the community that had earnings from work, median earnings were \$29,638, a gap of \$10,550. This gap is smallest (meaning the earnings of people with disabilities are closest to the earnings of people without disabilities) in Nevada (\$4,387) and largest (meaning the earnings of people with disabilities are furthest from the earnings of people without disabilities) in the District of Columbia (\$17,763).

[1] Difference of Disability and No Disability.

Section 6: Veterans

This section presents statistics on veterans. Specifically, the data address service-connected disability rating; the prevalence of disabilities in the veteran population; the portion of the veteran population that experiences poverty, by disability status; and veterans' benefits, by disability status. The principal sources of these statistics are the U.S. Census Bureau, specifically the American Community Survey (ACS), and the Veterans Benefits Administration's Annual Benefits Report.

Tables

Table 6.1: In 2011, according to the ACS, 810,245 individuals ages 18 and over living in the community reported having a military service-connected disability rating of 70 percent or more.

Table 6.2: In 2011, there were 21,179,518 civilian veterans ages 18 years and over living in the community, 5,560,980 of which were individuals with disabilities—a prevalence rate of 26.3 percent. West Virginia had the highest prevalence rate (33.2 percent), while Maryland had the lowest prevalence rate (19.9 percent).

Tables 6.3 and 6.4: In 2011, of the 2,087,637 civilian veterans with disabilities ages 18 to 64 years living in the community, 348,348 individuals lived in poverty—a poverty rate of 16.7 percent. In contrast, of the 10,020,098 civilian veterans without disabilities ages 18 to 64 years living in the community, 724,053 civilian veterans lived in poverty—a poverty rate of 7.2 percent. The poverty rate for civilian veterans with disabilities was highest in the District of Columbia (37.4 percent) and lowest in New Hampshire (7.3 percent).

Table 6.5: In 2011, the poverty rate of civilian veterans with disabilities ages 18 to 64 years living in the community was 16.7 percent, while the poverty rate of individuals without disabilities ages 16 to 64 years living in the community was 7.2 percent—a poverty gap of 9.5 percentage points. The poverty gap was smallest in South Dakota (1.9 percentage points) and greatest

in the District of Columbia (28.3 percentage points).

Table 6.6: In the federal fiscal year 2011, the United States spent a total of \$41,846,520,536 on compensation and pension benefits paid to veterans with disabilities. Of that total amount, \$38,687,353,834 was spent on disability compensation, while \$3,159,166,702 was spent on disability pensions.

Section 7: Health Insurance Coverage

This section presents statistics on health insurance coverage, especially the health insurance coverage of people with disabilities. Specifically, the data address the percentage of people with and without disabilities who have some sort of health insurance coverage. This section also addresses the type of health insurance coverage possessed by people with disabilities. The principal source of these statistics is the U.S. Census Bureau, specifically the American Community Survey.

Tables

Table 7.1: In 2011, 82.6 percent of individuals with disabilities ages 18 to 64 years living in the community had health insurance coverage. In contrast, 78.7 percent of individuals without disabilities ages 18 to 64 years living in the community had health insurance coverage—a health insurance coverage gap between those without and with disabilities of 3.9 percentage points. In other words, in the United States as a whole, 3.9 percent more individuals with disabilities had health insurance than individuals without disabilities. The health insurance gap ranges from 9.8 percentage points in New Mexico to -1.6 percentage points in North Dakota.

Table 7.2: In 2011, 42.2 percent of individuals with disabilities ages 18 years and over living in the community had private health insurance and 51.7 percent had public health insurance (some had both), while 17.4 percent of individuals with disabilities ages 18 years and over living in the community did not have health insurance. The state with the smallest percentage of people with disabilities without health insurance coverage was Massachusetts (4.6 percent). The state with the largest percentage of people with disabilities without health insurance coverage was Alaska (25.6 percent).

[1] Percentage with Health Insurance Coverage.

[2] Percentage without Health Insurance Coverage.

Section 8: Health

This section presents statistics on health, especially the health of people with disabilities. Specifically, the data address the prevalence of disabilities, health behaviors (such as smoking) by disability status, vaccination, and insurance. These statistics were generated by the authors using the Behavioral Risk Factor Surveillance Survey (BRFSS). See the Center for Disease Control and Prevention's Disability and Health Data System (DHDS) website for more detailed information on the health of the population with disabilities.

Tables

Table 8.1: In 2011, there were 217,151,000 individuals ages 18 and over living in the community in the United States, and 55,057,000 had a disability (25.4 percent). The state with the largest number of individuals with disabilities was California, with 5,605,000 individuals with disabilities, while the state with the smallest number of individuals with disabilities was Wyoming, with 100,000 individuals with disabilities. West Virginia had the highest prevalence rate, 33.1 percent, while the Hawaii had the lowest prevalence rate, 20.7 percent.

Table 8.2: In 2011, the prevalence of disability increased with age in all states. The state with the highest prevalence rate for individuals ages 18 to 44 years was Washington (22.0 percent), while the lowest was in Texas (12.4 percent). For individuals ages 45 to 64 years, the highest prevalence rate was in West Virginia (41.2 percent), while the lowest was in Hawaii (22.9 percent). For individuals ages 65 years and older, the highest prevalence rate was in Mississippi (46.5 percent), while the lowest was again in Maryland (34.6 percent).

Table 8.3: In 2011, adults (ages 18 years and older) with disabilities were more likely to smoke (25.5 percent) than adults without disabilities (18.2 percent). This finding was observed in all states. Adults with disabilities were most likely to smoke in Kentucky (36.2

percent) and least likely to smoke in New York (15.7 percent).

Table 8.4: In 2011, adults (ages 18 years and older) with disabilities were more likely to be obese (38.1 percent) than adults without disabilities (23.9 percent). This finding was observed in all states. Adults with disabilities were most likely to be obese in Louisiana (44.9 percent) and least likely to be obese in Colorado (28.2 percent).

Table 8.5: In 2011, adults (ages 18 years and older) with disabilities were less likely to binge drink (12.6 percent) than adults without disabilities (20.4 percent). This finding was observed in all states. Adults with disabilities were most likely to binge drink in the District of Columbia (18.0 percent) and least likely to binge drink in Tennessee (4.0 percent).

Table 8.6: In 2011, individuals ages 18 and over with disabilities in Vermont were most likely to have health insurance coverage (94.5 percent), while individuals ages 18 and over with disabilities in Nevada were least likely to have health insurance coverage (77.6 percent).

Section 9: Social Security Administration Programs

This section presents statistics on Social Security Administration (SSA) Programs. Specifically, these statistics concern the number of beneficiaries served by, and the amount spent on, Supplemental Security Income (SSI) and Social Security Disability Insurance (SSDI), by disability status. Table 9.7 also addresses those who have concurrent benefits (are enrolled in both programs), by disability status. The principal source for this section is the Social Security Administration, specifically the 2010 Annual Statistical Supplement.

Tables

Table 9.1: In December 2010, of the 7,911,327 individuals who received federally administered payments from the SSI program, 1,183,709 were eligible based on being 65 years or older, 69,280 were eligible based on blindness, and 6,660,320 were eligible based on disability.

Table 9.2: In December 2010, of the \$48,178,537,000 of federally administered payments from the SSI program, \$5,444,383,000 was spent on individuals eligible based on being ages 65 years or older, \$420,161,000 was spent on individuals eligible based on blindness, and \$43,312,038,000 was spent on individuals eligible based on disability.

Table 9.3: In December 2010, of the 1,237,949 individuals under age 18 who received federally administered payments from the SSI program, 5,937 were eligible based on blindness, and 1,229,713 were eligible based on disability.

Table 9.4: In December 2010, 7,912,266 individuals received federally administered payments from the SSI program, and 1,239,269 of those who received payments were under age 18, 4,631,507 were ages 18 to 64, and 2,041,490 were ages 65 and older.

Table 9.5a: In December 2010, of the 9,175,095 individuals who were beneficiaries under SSDI program, 8,016,515 were disabled workers,

919,859 were disabled adult children, and 238,721 were disabled widows(ers).

Tables 9.5b–9.5g: In December 2010, of the 9,175,095 individuals who were beneficiaries under the SSDI program, 359,736 were receiving benefits on the basis of injuries.

Table 9.6: In December 2010, of the \$112,520,772 spent on individuals who were beneficiaries under the SSDI program, \$102,999,936,000 was spent on individuals who were disabled workers, \$7,563,636,000 was spent on individuals who were disabled adult children, and \$1,957,200,000 was spent on individuals who were disabled widows(ers).

Table 9.7: In December 2010, of the 14,016,943 individuals ages 18 to 64 receiving SSI and/or SSDI, 8,016,515 were SSDI disabled workers only, 4,631,051 were SSI recipients only, and 1,369,377 were both SSDI disabled workers and SSI recipients (i.e., concurrent beneficiaries). (See Table 9.10 for the number of monthly SSDI applications over time.)

Table 9.8a: From 2009 to 2010, the total number of recipients of SSI increased in the United States by 3.1 percent. The total number of recipients increased the most in New Hampshire (by 7.7 percent); no states saw a decrease, but the smallest increase was in West Virginia (by 0.6 percent). From 2009 to 2010, the number of SSI recipients ages 65 and older decreased in the United States by 0.9 percent. The number of recipients ages 65 and older increased the most in the Montana (by 23.8 percent) and decreased the most in Alabama (by 6.5 percent).

Table 9.8b: From 2009 to 2010, the number of blind recipients of SSI decreased in the United States by .01 percent. The number of blind recipients increased the most in Delaware (by 12.9 percent) and decreased the most in North Dakota (by 18.6 percent). From 2009 to 2010, the number of disabled recipients of SSI increased in the United States by 3.5 percent. The number of disabled recipients increased the most in New Hampshire (by 8.0 percent); it did not decrease in any states, but the smallest increase was in West Virginia (by 0.9 percent).

Table 9.9a: From 2009 to 2010, the total number of recipients of SSDI increased 5.1 percent in the United States. The total number of recipients increased the most in Colorado (by 7.0 percent) and increased the least in West Virginia (by 2.5 percent). From 2009 to 2010, the number of disabled workers receiving SSDI increased in the United States by 5.3 percent.

Table 9.9b: From 2009 to 2010, the total number of recipients of SSDI among disabled adult children increased in the United States by 3.1 percent. The total number of recipients among disabled adult children increased the most in Alaska (by 10.5 percent) and increased the least in North Dakota (by 1.1 percent). From 2009 to 2010, the number of disabled widow(er)s receiving SSDI increased in the United States by 3.7 percent.

Table 9.10: The monthly number of SSDI participants (disabled-worker benefits only) grew from 154,330 in January of 2003 to 288,795 in August of 2012. The highest number can be found in October 2010 reporting 293,682 participants. Since January 2009, the figures have always been over two hundred thousand except for a few months.

Source: Social Security Administration. Selected Data from Social Security's Disability Program. Release Date: August 2012; <<http://www.ssa.gov/OACT/STATS/dibStat.html>>; (accessed 26 September 2012). The number of applications is for disabled-worker benefits only and, as such, excludes disabled child's and disabled widow(er)'s benefits. These applications ultimately result in either a denial or award of benefits.

Section 10: Medicaid and Medicare

This section presents statistics concerning Medicaid and Medicare, government run health care programs. Specifically, these statistics concern the number of people with disabilities served under Medicaid and Medicare and the amount spent under each program on people with disabilities. The principal source for this section is the U.S. Department of Health and Human Services' 2011 Medicare and Medicaid Statistical Supplement, produced by the Centers for Medicare and Medicaid Services.

Tables

Table 10.1: In the federal fiscal year 2009, the United States spent a total of \$141,596,483,252 on Medicaid payments to people with disabilities, 43.5 percent of the total amount spent on all Medicaid payments. The District of Columbia spent the largest percentage of its Medicaid payments on payments to people with disabilities (58.0 percent), while Michigan spent the smallest percentage of its Medicaid payments on payments to people with disabilities (29.1 percent).

Table 10.2: In the federal fiscal year 2009, the U.S. Medicaid program served a total of 9,036,364 beneficiaries with disabilities, 14.5 percent of the total number of persons served by Medicaid. West Virginia had the largest percentage of Medicaid beneficiaries with disabilities (26.6 percent), while Arizona had the smallest percentage of Medicaid beneficiaries with disabilities (9.0 percent).

Table 10.3: In the federal fiscal year 2010, the U.S. Medicare program spent a total of \$63,434,000,000 on people with disabilities—19.2 percent of total Medicare expenditures. This was the largest percentage of Medicare spending on people with disabilities during any year between 1973 and 2010.

Table 10.4: As of July 1, 2010, the U.S. Medicare program served a total of 7,846,486 beneficiaries with disabilities—16.8 percent of the total number of persons served by Medicare.

Kentucky had the largest percentage of Medicare beneficiaries with disabilities (25.5 percent), while Hawaii had the smallest percentage of Medicare beneficiaries with disabilities (10.8 percent).

Table 10.5: From the federal fiscal year 2008 to fiscal year 2009, the percentage of total beneficiaries of Medicaid with disabilities (i.e., the total number of disabled Medicaid beneficiaries divided by the total number of Medicaid beneficiaries) decreased 0.3 percent in the United States. The percentage of Medicaid beneficiaries with disabilities increased the most in District of Columbia (by 1.2 percentage points) and decreased the most in Mississippi (by 5.2 percentage points).

Table 10.6: From 2009 to 2010, the percentage of total Medicare enrollees with disabilities (i.e., the total number of disabled Medicare enrollees divided by the total number of Medicare enrollees) in the United States increased by 0.1 percentage points. The percentage of Medicare enrollees with disabilities increased the most in Ohio (a 0.5 percentage point increase) and decreased the most in Alaska (a 0.2 percentage point decrease).

[2] Difference in Disability as a percent of Total.

Section 11: Special Education

This section presents statistics on Special Education programs, specifically on children served under the Individuals with Disabilities Education Act (IDEA), Part B. These statistics concern the number of children with disabilities served (by age and by type of disability), inclusive education of children with disabilities, dropout and graduation rates, and state grant awards. The principal source of these statistics is the Office of Special Education Programs' Data Accountability Center, which produces IDEA 618 Data Tables.

Tables

Table 11.1: In the fall of 2010, there were 67,776,207 students ages six to 21 in the United States. Of these students' ages six to 21, 5,699,061 or 8.4 percent received special education services under IDEA, Part B. Idaho had the smallest percentage (6.3 percent), while New Jersey had the largest percentage (11.6 percent).

Table 11.2: Of the 6,419,405 youth ages three to 21 who received special education services under IDEA, Part B, in the fall of 2010, 720,344 (or 11.2 percent) were three to five years old; 2,611,244 (or 40.7 percent) were six to 11 years old; 2,724,538 (or 42.4 percent) were 12 to 17 years old, and 363,279 (or 5.7 percent) were 18 to 21 years old.

Tables 11.3a-11.3d: The 5,699,061 students ages six to 21 who received special education services under IDEA, Part B, in the fall of 2010 were in the following diagnostic categories: 2,346,993 (or 41.2 percent) in specific learning disability; 1,063,888 (or 18.7 percent) in speech or language impairment; 435,170 (or 7.6 percent) in mental retardation; 385,492 (or 6.8 percent) in emotional disturbance; 122,062 (or 2.1 percent) in multiple disabilities; 68,585 (or 1.2 percent) in hearing impairments; 55,229 (or 1.0 percent) in orthopedic impairments; 694,216 (or 12.2 percent) in other health impairments; 24,773 (or 0.4 percent) in visual impairments; 367,688 (or 6.5 percent) in autism; 1,217 (or 0.02 percent) in deaf-blindness; 24,308 (or 0.4

percent) in traumatic brain injury; and 108,622 (or 1.9 percent) in developmental delay.

Table 11.4: Of the 5,699,061 students ages six to 21 who received special education services under IDEA, Part B, in the fall of 2010, 4,583,965 (or 80.4 percent) spent 40 percent or more of their time in the regular classroom. The District of Columbia had the smallest percentage (60.8 percent), while North Dakota had the largest percentage (93.1 percent).

Table 11.5: Of the 405,520 students ages 14 to 21 who exited IDEA, Part B, special education services in 2009-2010, 253,815 graduated with a diploma, 59,676 received a certificate, 84,421 dropped out, and 6,328 died or aged out of service.

Table 11.6: Of the 404,520 students ages 14 to 21 who exited IDEA, Part B, special education services in 2009-2010 by either graduating with a diploma, receiving a certificate of completion, dropping out, dying, or aging out of service, 62.7 percent graduated with a diploma. Mississippi had the smallest percentage (25.2 percent), while Minnesota had the largest percentage (88.3 percent).

Table 11.7: Of the 404,520 students ages 14 to 21 who exited IDEA, Part B, special education services in 2009-2010 by either graduating with a diploma, receiving a certificate of completion, dropping out, dying, or aging out of service, 20.9 percent dropped out. Tennessee had the smallest percentage (7.9 percent), while South Carolina had the largest percentage (53.7 percent).

Table 11.8: From the school year beginning in Fall 2009 to the school year beginning in Fall 2010, the graduation rate among students ages 14 to 21 served under IDEA, Part B, increased in the United States by 2.0 percentage points. The graduation rate increased the most in Indiana (by 10.1 percentage points) and decreased the most in Delaware (by 10.3 percentage points).

Table 11.9: From the school year beginning in fall 2009 to the school year beginning in fall 2010, the dropout rate among students ages 14 to 21 served under IDEA, Part B, decreased in the United States by 1.4 percentage points. The

dropout rate increased the most in Hawaii (by 14.1 percentage points) and decreased the most in the District of Columbia (by 18.7 percentage points).

[2] Difference in Dropout Rate.

Section 12: Vocational Rehabilitation

This section presents statistics on federal and state vocational rehabilitation programs. These data concern the number of individuals with disabilities who apply for services, receive services, and find employment (are successfully rehabilitated). The tables also address the expenditures associated with vocational rehabilitation, as well as whether vocational rehabilitation agencies are on order of selection. The principal source for this section is the Rehabilitation Services Administration's Management Information System.

Tables

Table 12.1: In the federal fiscal year 2010, state vocational rehabilitation agencies processed 604,095 applicants.

Table 12.2: In the federal fiscal year 2010, state vocational rehabilitation agencies closed 327,599 cases of individuals who either initiated or completed services.

Table 12.3: In the federal fiscal year 2010, state vocational rehabilitation agencies closed 169,260 cases of individuals who either initiated or completed services in which the individuals entered successful employment.

Table 12.4: In the federal fiscal year 2010, of 327,599 closed cases of individuals who either initiated or completed services, 51.7 percent achieved successful employment, a rehabilitation rate of 51.7 percent. The agency with the largest rehabilitation was the Missouri blind agency with 82.4 percent, while the agency with the smallest rehabilitation rate was the Alabama combined agency with 25.8 percent.

Table 12.5: In the federal fiscal year 2010, the United States spent a total of \$3,831,133,005 on vocational rehabilitation expenditures for people with disabilities. The combined agency of California spent the most (\$333,399,151), while the blind agency of Vermont spent the least (\$1,802,481).

Table 12.6: In the federal fiscal year 2010, the United States spent a total of \$291,190,983 on vocational rehabilitation expenditures for post-secondary institutions for people with disabilities. The combined agency of California spent the most on post-secondary institutions (\$26,705,051), while the blind agency of Vermont spent the least on post-secondary institutions (\$63,228).

Table 12.7: In the federal fiscal year 2010, forty agencies were on Order of Selection, down from 61 agencies in 2001. Over the period from 2005 to 2010, fifteen states (including the District of Columbia) have never had any agency on Order of Selection: Alabama, Alaska, the District of Columbia, Florida, Idaho, Michigan, Montana, Nevada, New Hampshire, New York, North Carolina, Pennsylvania, South Dakota, Texas, and Utah. Over the period from 2005 to 2010, twenty-two states have always had all of their agencies on Order of Selection: Arizona, Arkansas, California, Colorado, Georgia, Hawaii, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maine, Maryland, Mississippi, Ohio, Oklahoma, Oregon, Rhode Island, Virginia, West Virginia, Wisconsin, and Wyoming.

Table 12.8: From 2009 to 2010, the number of vocational rehabilitation applicants in the United States increased by 2.8 percent. Vocational rehabilitation applicants increased the most at the blind agency of New York (by 24.2 percent) and decreased the most at the combined agency of Connecticut (by 19.2 percent).

Table 12.9: From 2009 to 2010, the rehabilitation rate decreased in the United States by 4.0 percentage points. The rehabilitation rate increased the most at the general agency of Kentucky (by 20.0 percentage points) and decreased by the most at the general agency of Alabama (by 45.6 percentage points).

Source: Rehabilitation Services Administration, Management Information System, Ad Hoc Query of the Annual Review Report Cumulative Caseload Report; <<http://rsa.ed.gov>>; (accessed 15 June 2012). In some states there are separate agencies for the blind.

[1] Change in the Rehabilitation Rate

Section 13: Federal Government Spending and Employment

This section presents statistics concerning federal government spending and employment. Specifically, these statistics address federal spending on income maintenance; housing and food assistance; health care; education, training, and employment readiness; and other programs, all for people with disabilities. This section also focuses on the number of people with disabilities and people with targeted disabilities employed by the executive branch, including specific data on the employment of people with disabilities and people with targeted disabilities within the departments of the executive branch. The principal sources of these statistics are “Federal Expenditures on Working-age People with Disabilities” for Fiscal Year 2008, a document produced by the Center for Studying Disability Policy, a part of Mathematica Policy Research Inc., as well as the 2007 edition of the U.S. Office of Personnel Management’s Federal Civilian Workforce Statistics Factbook.

Tables

Table 13.1: In the federal fiscal year 2008, the Social Security Administration spent \$136,917,000,000 on programs for working-age individuals with disabilities. That same year, \$20,113,000,000 was spent on veterans’ programs. Table 13.1 also lists amounts spent on Means Tested Assistance Programs for individuals with disabilities and other federal retirement and disability compensation programs for the most recent years available.

Table 13.2: In the federal fiscal year 2008, the federal government spent \$7,821,000,000 on food assistance programs for working-age individuals with disabilities. Table 13.2 also lists amounts spent on housing assistance programs for individuals with disabilities for the most recent years available.

Table 13.3: In the federal fiscal year 2008, the federal government spent \$13,797,000,000 on veterans’ programs. In the federal fiscal year 2007, the federal government spent

\$1,051,000,000 on workers’ compensation medical costs. Table 13.3 also lists amounts spent on technology programs, protection and advocacy, and other programs for individuals with disabilities for the most recent years available.

Table 13.4: This table lists amounts spent on vocational rehabilitation, education, and other employment related programs for individuals with disabilities for the most recent years available.

Table 13.5: In the federal fiscal year 2008, the federal government spent \$215,000,000 on transportation services and \$176,000,000 on demonstrations/systems change for people with disabilities. In the federal fiscal year 2007, the federal government spent \$367,000,000 on a Social Services Block Grant for people with disabilities. Table 13.5 also lists amounts spent on Medicare and Medicaid programs and for other federal health care programs for individuals with disabilities for the most recent years available.

Table 13.6: As of September 30, 2006, the executive branch of the federal government employed a total of 123,484 people with disabilities (6.8 percent of total employees) and 17,711 people with targeted disabilities (1.0 percent of total employees). The Department of Veterans Affairs had the largest percentage of their employees with disabilities (9.4 percent), while the Department of Justice had the smallest percent of their employees with disabilities (3.5 percent). The Department of the Treasury had the largest percentage of their employees with targeted disabilities (1.8 percent), while the Department of Homeland Security had the smallest percentage of employees with targeted disabilities (0.4 percent).

Section 14: International Patterns

This section presents international disability statistics. Specifically, these statistics address international employment rates for people with disabilities and the percentages of total populations receiving disability benefits. Both of the tables in this section face severe limitations. In both of the tables, it is difficult to compare rates across countries because countries often define disabilities differently and have different employment and benefits structures. Additionally, these statistics may come from different sources (for example: from a survey versus from a census) and represent different years. The principal source of this data is a report by the Organization of Economic Cooperation and Development (OECD).

Tables

Table 14.1: In 2004, the employment rate of working-age individuals with disabilities in the United States was 39.9 percent. Table 14.1 lists employment rates for people with disabilities in 25 countries for the most recent year collected by the Organization for Economic Cooperation and Development. These data are limited by differences in the sources, the years represented, and the definitions of disability.

Table 14.2: In 2006, 5.9 percent of the United States working-age population received disability benefits. Table 14.2 lists the percentage of populations in 26 countries receiving disability benefits for the most recent year collected by the Organization for Economic Cooperation and Development. These data are limited by differences in the sources, the years represented, and the definitions of disability.

Source: Organization for Economic Cooperation and Development (OECD), "Sickness, Disability and Work: Key figures and data on low employment rates of people with disability and high disability benefit reciprocity rates in many OECD countries", Data Spotlight Figure, <<http://www.oecd.org/dataoecd/21/22/42654215.xls>> (accessed 9 September 2010). This data is limited by differences in sources, years the data was collected, and definitions of disability.

Section 15: Disability Type

This section presents statistics that allow for the most detail available in United States disability statistics with respect to disability type and severity. Population size, prevalence, employment, earnings, and family income statistics are provided. These estimates are based on the U.S. Census Bureau's Survey of Income and Program Participation (SIPP). These estimates are from Brault (2012), *Americans with Disabilities: 2010* (U.S. Census Bureau Current Population Reports, P70-131), which also contains comparisons to 2005 estimates.

Tables

Table 15.1: Based on data from the SIPP, in 2010 (May–August 2010), there were 303,858,000 civilians living in the community, 56,672,000 of which were individuals with disabilities—a prevalence rate of 18.7 percent. Among individuals with disabilities, 38,284,000 had severe disabilities.

Table 15.2: In 2010 (May–August 2010), among the 177,295,000 individuals ages 21 to 64 living in the community, 16.6 percent (29,479,000 individuals) were people with disabilities, 5.0 percent (4,112,000 individuals) had difficulty seeing, 1.9 percent (3,310,000 individuals) had difficulty hearing, 6.6 percent had difficulty walking (11,759,000 individuals), and 6.0 percent (10,661,000 individuals) had mental disabilities. Among individuals reporting an activity limitation and/or fair/poor health, 8,099,000 individuals reported back or spine problems as the cause.

Table 15.3: In 2010 (May–August 2010), among the 29,479,000 individuals with disabilities ages 21 to 64 living in the community, 41.1 percent were employed, compared to 79.1 percent of their counterparts without disabilities. The employment rate varies by disability type: 41.7 percent for those with difficulty seeing, 55.5 percent for those with difficulty hearing, 28.7 percent for those with difficulty walking, and 34.1 percent for those with mental disabilities.

Table 15.4: In 2010 (May–August 2010), among the 29,479,000 individuals with disabilities ages 21 to 64 living in the community, median monthly earnings were \$1,961, compared to \$2,724 for their counterparts without disabilities. Among individuals with disabilities ages 21 to 64 living in the community, median monthly family income was \$2,856, compared to \$4,771 for their counterparts without disabilities.

Table 15.1: Civilians Living in the Community for the United States and States, by Age, Disability Status, and Severity: 2010

Seeing / Hearing / Speaking		
Difficulty seeing	2,281	2,635
Severe	2,564	2,525
Not severe	2,207	2,671
Difficulty hearing	2,484	3,472
Severe	1,943	3,591
Not severe	2,495	3,451
Difficulty with speech	1,489	2,508
Severe	1,282	2,883
Not severe	1,579	2,473
Walking / Using Stairs		
Difficulty walking	1,734	2,411
Severe	1,488	2,108
Not severe	1,892	2,780
Difficulty using stairs	1,752	2,424
Severe	1,598	2,019
Not severe	1,815	2,590
Used a wheelchair	2,404	2,506

Disability Status / Type / Severity	Earnings [3]	Family Income [3]
Used a cane / crutches / walker	2,077	2,399
Selected Physical Tasks		
Difficulty lifting	1,748	2,393
Severe	1,779	2,199
Not severe	1,735	2,544
Difficulty grasping	1,712	2,524
Severe	1,784	2,737
Not severe	1,685	2,497
Difficulty moving chair [1]	1,860	2,561
Severe	1,892	2,411
Not severe	1,833	2,798
Difficulty standing [1]	1,881	2,529
Difficulty sitting [1]	1,950	2,404
Difficulty crouching [1]	2,069	2,767
Difficulty reaching [1]	1,884	2,417
ADLs and IADLs		
With an ADL limitation	1,553	2,224
Needed assistance	1,309	2,180
Did not need assistance	1,648	2,293
With an IADL limitation	1,203	2,286
Needed assistance	832	2,286
Did not need assistance	1,592	2,286
Mental		
With a mental disability	1,512	2,407
With one or more selected conditions	1,456	2,470
A learning disability	1,901	2,582
Alzheimer's, senility, or dementia	1,413	2,180
Intellectual disability	480	2,064

Table 15.4 (continued): Median Monthly Earnings and Family Income (\$)—Civilians Ages 21 to 64 Years Living in the Community for the United States, by Disability Type: 2010

Disability Status / Type / Severity	Earnings [3]	Family Income [3]
Other developmental disability	832	2,661
Other mental / emotional condition	1,159	2,152
With one or more selected symptoms	1,355	2,118
Depressed or anxious	1,393	2,080
Trouble getting along with others	1,439	1,984
Trouble concentrating	1,129	2,004
Trouble coping with stress	1,281	2,038
Working at a Job		
With disability related problems [1]	1,359	2,427
Has difficulty remaining employed	795	2,047
Limited in kind/amount of work [1]	1,342	2,411
Prevented [1]	1,244	1,950
Not prevented [1]	1,348	3,294
Selected Conditions [2]		
Arthritis or rheumatism [1]	1,891	2,604
Back or spine problem [1]	1,928	2,608
Diabetes [1]	2,057	2,475
Heart trouble or hardening of the arteries [1]	1,774	2,531
High blood pressure [1]	1,928	2,381
Lung or respiratory problem [1]	1,922	2,438
Mental or emotional problem [1]	949	1,941
Stiffness or deformity of legs, arms, feet, or hands [1]	1,967	2,856

[1] Not part of the definition of disability.

[2] Selected conditions reported as cause of activity limitations or fair/poor health.

[3] The definitions of earnings and income may be found in the source.

Glossary

Ambulatory Disability (ACS)—In the ACS, individuals five or more years old who responded “yes” when asked if they had “serious difficulty walking or climbing stairs.”

American Community Survey (ACS)—The American Community Survey is a large, continuous demographic survey conducted by the U.S. Census Bureau that will provide accurate and up-to-date profiles of America’s communities every year. Annual and multi-year estimates of population and housing data are generated for small areas, including tracts and population subgroups. This information is collected by mailing questionnaires to a sample of addresses.

Base Population—The sum of a population or an estimate used as the root for evaluation purposes. Typically, the last census count or the estimate from a previous date is used.

Behavioral Risk Factor Surveillance Survey (BRFSS)—The Behavioral Risk Factor Surveillance System is a state-based system of health surveys that collects information on health risk behaviors, preventive health practices, and health care access primarily related to chronic disease and injury. BRFSS was established in 1984 by the Centers for Disease Control and Prevention (CDC); currently data are collected monthly in all 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and Guam. More than 350,000 adults are interviewed each year, making the BRFSS the largest telephone health survey in the world. States use BRFSS data to identify emerging health problems, establish and track health objectives, and develop and evaluate public health policies and programs. Many states also use BRFSS data to support health-related legislative efforts.

Binge Drinking (BRFSS)—Respondents were asked “[c]onsidering all types of alcoholic beverages, how many times during the past 30 days did you have [5, if male respondent] [4, if female respondents] or more drinks on an occasion?” Respondents who reported doing so at

least one time were considered to have engaged in binge drinking.

Civilian—A person not in active-duty military.

Cognitive Disability (ACS)—In the ACS, individuals who indicated “yes” when asked if due to a physical, mental, or emotional condition, they had “serious difficulty remembering, or making decisions.”

Current Population Survey-Basic Monthly (CPS-BMS)—The Current Population Survey-Basic Monthly Survey is a monthly survey of about 50,000 households conducted by the U.S. Census Bureau for the Bureau of Labor Statistics. This survey is the primary source of information on the labor force characteristics of the United States population and provides estimates for the nation as a whole. The sample is scientifically selected to represent the civilian non-institutionalized population. Individuals are asked questions about the employment status of each member of the household 15 years of age and older, but published data only focuses on those ages 16 and over. Estimates obtained from the CPS-BMS include employment, unemployment, earnings, hours of work, and other indicators.

Current Population Survey (CPS-ASEC)—The Current Population Survey-Annual Social and Economic Supplement (CPS-ASEC) is an annual survey conducted by the U.S. Census Bureau. This survey is the primary source of information on the income, poverty, and health insurance. It also asks about employment in the previous calendar year. The sample for the CPS-ASEC is drawn from the sample of the CPS-BMS. The CPS-ASEC is also known as the CPS March Supplement and the CPS Income Supplement.

Disability Status (ACS)—The U.S. Census Bureau used six questions to identify persons with disabilities. A response of “yes” to any one of the questions indicates that the person in question has a disability—vision, hearing, cognitive, ambulatory, self-care, and independent living. However, the questions related to cognitive, ambulatory, self-care, and independent living are not used to identify disability in individuals less than five years old, and the

question related to independent living is not used to identify disability in individuals less than 18 years old.

Disability Status (BRFSS)—An individual is classified as having a disability based on answers to the following questions: (1) Are you limited in any way in any activities because of physical, mental, or emotional problems? and (2) Do you now have any health problem that requires you to use special equipment, such as a cane, a wheelchair, a special bed, or a special telephone (include occasional use or use in certain circumstances)?

Disability Status (CPS-BMS & CPS-ASEC)—The CPS program uses a set of six questions to identify persons with disabilities. A response of “yes” to any one of the questions indicates that the person in question has a disability. The disability questions appear in the CPS in the following format:

This month we want to learn about people who have physical, mental, or emotional conditions that cause serious difficulty with their daily activities. Please answer for household members who are 16 years old or over.

- Is anyone deaf or does anyone have serious difficulty hearing?
- Is anyone blind or does anyone have serious difficulty seeing even when wearing glasses?
- Because of a physical, mental, or emotional condition, does anyone have serious difficulty concentrating, remembering, or making decisions?
- Does anyone have serious difficulty walking or climbing stairs?
- Does anyone have difficulty dressing or bathing?
- Because of a physical, mental, or emotional condition, does anyone have difficulty doing errands alone such as visiting a doctor’s office or shopping?

Disabled-Worker (SSA)—A worker not yet at full retirement age receiving insurance payments due to a disability.

Earnings (ACS)—Regularly received income from salaries/wages, self-employment or both, for people ages 16 or older before deductions for personal income taxes, Social Security, bond purchases, union dues, Medicare deductions, etc.

Educational Attainment (ACS)—All individuals ages 18 or older are classified based on their highest degree or level of education attained. The categories include:

1. Completed the 12th grade without receiving a high school diploma.
2. High school graduate, meaning received a diploma or General Educational Development (G.E.D.) and did not attend college.
3. Some college credit, but less than one year.
4. One or more years of college, but no degree.
5. Associate’s degree which includes people who generally completed two years of college-level work in an occupational program that prepared them for a specific occupation, or an academic program primarily in the arts and sciences. The course work may or may not be transferable to a bachelor’s degree.
6. Bachelor’s degree or more which includes individuals who received a bachelor’s degree and have taken additional courses but not received a master’s degree or PhD.
7. Master’s degrees include the traditional MA and MS degrees and field-specific degrees, such as MSW and MBA.
8. Professional degrees which includes MD, DDS, DVM, LLB, and JD.
9. Doctorate degrees which include PhD. Schooling completed in foreign or ungraded school systems is reported as the equivalent level of schooling in the regular American system. Certificates or diplomas for training in specific trades or from vocational, technical, or business schools are not

included. Honorary degrees awarded for a respondent's accomplishments are not included.

Employed Persons (CPS-BMS & CPS-ASEC)—Individuals ages 16 or older who are civilians and are not currently institutionalized and, during the reference week, (1) performed at least one hour of work as a paid employee, worked in their own business, profession, or on their own farm, or worked 15 hours or more as unpaid worker in a business owned by a relative; and (2) all those who had jobs or businesses but are on leave because of vacation, illness, bad weather, childcare problems, maternity or paternity leave, labor-management dispute, job training, or other family or personal reasons, regardless of whether they were compensated for the time off or were seeking other jobs. Each employed person is counted only once, even if he or she holds more than one job. Individuals who work around their own house (painting, repairing, or own home housework) or volunteer for religious, charitable, and other organizations are excluded.

Employment Status (ACS)—In the ACS, individuals were asked a series of questions designed to identify their status. Based on the answers, individuals were classified into one of five groups: (1) people who worked at any time during the reference week; (2) people on temporary layoff who were available for work; (3) people who did not work during the reference week but who had jobs or businesses from which they were temporarily absent (excluding layoff); (4) people who did not work during the reference week, but who were looking for work during the last four weeks and were available for work during the reference week; and (5) people not in the labor force. The employment status data shown in American Community Survey tabulations relate to people ages 16 or older.

Employment Gap—The difference between the total number of individuals employed and the number of individuals employed of a certain population.

Employment-Population Ratio (CPS-BMS)—The proportion of the civilian non-

institutionalized population ages 16 or older that is employed.

Employment Rate (CPS-ASEC)—The number of individuals that are employed as a percent of the civilian non-institutionalized population.

Full-Time, Year-Round (CPS-ASEC)—A person is considered to be working full-time, year-round worker if he or she worked 35 hours or more per week for 50 to 52 weeks in the past 12 months.

Full-Time, Year Round Rate (CPS-ASEC)—The number of individuals that are working full-time, year-round as a percent of the civilian non-institutionalized population.

Enrollment Gap—The difference between the total number of individuals associated with a particular population and the number of individuals from that population group that are employed.

Go-Outside-Home Disability (ACS)—An individual with difficulty going outside the home alone to shop or visit a doctor's office because of a physical, mental, or emotional condition lasting at least six months.

Hearing Disability (ACS)—In the ACS, individuals who indicated "yes" when asked if they were "deaf or ... [had] serious difficulty hearing."

Income (ACS)—The sum of all wages, salary, commissions, bonuses, and tips; self-employment income from own non-farm and farm businesses, including proprietorships and partnerships; interest, dividends, net rental income, royalty income, and income from estates and trusts; Social Security and Railroad Retirement income; Supplemental Security Income; any public assistance and welfare payments from the state and local welfare office; retirement, survivor, and disability pensions; and any other sources received regularly such as veterans' payments, unemployment compensation, child support, and alimony.

Income Maintenance Programs—Government programs that provide direct financial assistance to needy individuals, families, and/or households.

Examples include Temporary Assistance to Needy Families and general assistance.

Independent Living Disability (ACS)—In the ACS, individuals who indicated “yes” when asked if due to a physical, mental, or emotional condition, they had difficulty “doing errands alone such as visiting a doctor’s office or shopping.”

Individuals with Disabilities Education Act (IDEA)—A law ensuring services to children with disabilities throughout the nation. IDEA governs how states and public agencies provide early intervention, special education, and related services to more than 6.5 million eligible infants, toddlers, children, and youth with disabilities. Infants and toddlers with disabilities (ages birth through two) and their families receive early intervention services under IDEA, Part C. Children and youth (ages three through 21) receive special education and related services under IDEA, Part B.

Influenza Vaccination (BRFSS)—A flu vaccine injected or administered into the body. Individuals were categorized based on answers to the following questions: (1) A flu shot is an influenza vaccine injected into your arm. Have you had a flu shot? and (2) Have you had a flu vaccine that was sprayed in your nose? The flu vaccine sprayed in the nose is also called FluMist™.

Labor Force (CPS-BMS & CPS-ASEC)—All persons classified as employed or unemployed.

Labor Force Participation Rate (CPS-BMS & CPS-ASEC)—The labor force as a percent of the civilian non-institutionalized population.

Labor Market Attachment (CPS-ASEC)—A person is considered to be attached to the labor market if he or she worked at least at least 52 hours in the calendar year prior to the survey.

Labor Market Attachment Rate (CPS-ASEC)—The number of individuals attached to the labor market as a percent of the civilian non-institutionalized population.

Living in the Community—Describes persons who are residing in the community and who are

not living in institutions such as jails, prisons, nursing homes, hospitals, etc.

Medicaid (CMS)—Medicaid is a state administered but federally required program to provide health insurance to certain groups of people. States determine specific eligibility requirements, but in general low income individuals, families, children, and pregnant women are eligible for health care coverage under Medicaid. In some states, other groups (such as people with disabilities) are also eligible.

Medicare (CMS)—Medicare is a federal program that provides health care services to individuals 65 or older, individuals under age 65 with disabilities, and individuals of all ages with end stage renal failure. There are three programs within Medicare: Part A (hospital insurance), Part B (medical insurance), and Prescription Drug Coverage (new since January 1, 2006). Individuals pay into Part A throughout their careers, and then Part A covers that individual for hospital care. People who are eligible for Medicare have the opportunity to purchase Part B, or medical insurance, that covers them for more than just hospital care.

Non-Institutionalized Population—Describes individuals who are residing in the community and who are not living in institutions such as jails, prisons, nursing homes, hospitals, etc.

OASDI Benefits—The Social Security Administration’s Old-Age, Survivors, and Disability Insurance (OASDI) program provides monthly benefits to qualified retired and disabled workers, their dependents and to survivors of insured workers. Eligibility and benefit amounts are determined by the worker’s contributions to Social Security.

Obese (BRFSS)—The condition where a person has a body mass index greater than 30.

Order of Selection—A state is required by the federal government to implement an order of selection when it does not have the funds and/or the personnel to provide services for all eligible individuals with disabilities. This process is detailed under the Rehabilitation Act of 1973 and 34 CFR 361.36. When this situation occurs,

a state must classify eligible individuals according to the significance of their disability(ies), and must serve individuals with the most significant disabilities first.

Organization for Economic Cooperation and Development (OECD)—The OECD brings together the governments of countries committed to democracy and the market economy from around the world to support sustainable economic growth, boost employment, raise living standards, maintain financial stability, assist other countries' economic development, and contribute to growth in world trade. The OECD provides a setting where governments compare policy experiences, seek answers to common problems, identify good practice, and coordinate domestic and international policies.

Population—The total number of inhabitants in a defined geographic area including all races, classes, and groups.

Poverty (ACS & CPS-ASEC)—The Office of Management and Budget in Statistical Policy Directive 14 sets the standards for which poverty is calculated. The U.S. Census Bureau uses a set of dollar value thresholds that vary by family size and composition to determine who is in poverty. If a family's total income is less than the dollar value of the appropriate threshold, then that family and every individual in it are considered to be in poverty.

Poverty Rate (ACS & CPS-ASEC)—Percent of the population who are determined to be in poverty.

Race (ACS)—Individuals identified themselves as one of six categories in the survey: White, Black or African American, American Indian or Alaska Native, Asian, Native Hawaiian or Other Pacific Islander, or Some Other Race.

Rehabilitation Rate—The number of successful employment outcomes divided by the number of closures after initiating or completing services.

Resident Population—All residents (both civilian and Armed Forces) living in the United States (all 50 states and the District of Columbia).

Seasonally Adjusted Statistics—Statistics that face predictable variation over the course of a year due to seasonal changes (i.e., increases in employment in farming during harvest months) and are adjusted using statistical techniques that attempt to account for these expected seasonal changes.

Self-Care Disability (ACS)—In the ACS, individuals ages five or older who responded "yes" when asked if they had "serious difficulty dressing or bathing."

Service-Connected Disability Rating—In the ACS, the veterans affairs service-connected disability rating for an individual who is a veteran. The rating reflects the degree of the veteran's disability on a scale from 0 to 100 percent, in increments of 10 percent.

Service-Connected Disability Rating Status—In the ACS, the designation associated with individuals who were in the Reserves or National Guard, trained with the Reserves or National Guard, or active-duty military that have a disability as a result of disease or injury incurred or aggravated during active military service. These disabilities are defined according to the VA Schedule for Rating Disabilities in Title 38, U.S. Code of Federal Regulations, Part 4.

Smoking (BRFSS)—Respondents were asked about smoking: "Have you smoked at least 100 cigarettes in your entire life?" and "Do you now smoke cigarettes every day, some days, or not at all?" Respondents who reported smoking at least 100 cigarettes in their lifetime and who, at the time of survey, smoked either every day or some days were defined as current smoker.

Social Security Disability Insurance (SSDI)—A benefit paid to individuals and certain family members if they worked long enough and paid Social Security taxes.

Special Education—Specially designed instruction, at no cost to the parents, to meet the unique needs of a child with a disability, including (1) instruction at the classroom, home, hospitals and institutions, and in other settings; and (2) physical education. The term can include each of the following: (1) speech-language

pathology services, or any other related service, if the service is considered special education rather than a related service under state standards; (2) travel training; and (3) vocational education.

Supplemental Security Income (SSI)—The Social Security Administration pays benefits to disabled adults and children who have limited income and resources. SSI benefits also are payable to people ages 65 and older without disabilities who meet the financial limits.

Unemployed Persons (CPS-BMS & CPS-ASEC)—Individuals ages 16 or older and were available to work, who had no employment during the reference week, and had made specific efforts to find employment sometime during the month prior to the reference week.

Vision Disability—In the ACS, individuals who indicated “yes” when asked if they were “blind or ... [had] serious difficulty seeing even when wearing glasses.”

Vocational Rehabilitation (VR)—Services offered to individuals with mental or physical disabilities. These services are designed to enable participants to attain skills, resources, attitudes, and expectations needed to compete in the interview process, get a job, and keep a job. These services may also help an individual retrain for employment after an injury or mental disorder has disrupted previous employment.

Work Limitation (CPS-ASEC)—A person is considered to have a work limitation if he or she has “a health problem or disability which prevents [him or her] from working or which limits the kind or amount of work he or she can do.”

About the Center

The Rehabilitation Research and Training Center on Disability Statistics and Demographics facilitates evidence-based decision making in many different service and policy arenas to benefit persons with disabilities, leading to improved social outcomes. Large quantities of survey data and administrative records related to people with disabilities are collected each year. Yet these data lack continuity and are under-utilized, leading to missed opportunities to improve the programs and policies that advance the lives of people with disabilities. Policymakers, program administrators, service providers, researchers, advocates for people with disabilities, and people with disabilities and their families need accessible, valid data and statistics to support their decisions related to policy improvements, program administration, service delivery, protection of civil rights, and major life activities.

The Center's goal is to support decision making through a variety of integrated research and outreach activities by (1) improving knowledge about and access to existing data, (2) generating the knowledge needed to improve future disability data collection, and (3) strengthening connections between the data from and regarding respondents, researchers, and decision makers. In this way, the Center supports the improvement of service systems that advance the quality of life of people with disabilities.

Center Collaborators

The Center is a joint effort of

- Kessler Institute for Rehabilitation – led by John O'Neill,

in collaboration with

- American Association of People with Disabilities – led by Mark Perriello,
- Center for Essential Management Services – led by David Vandergoot,
- Council of State Administrators of Vocational Rehabilitation – led by Stephen Wooderson,

- Cornell University – led by Richard Burkhauser,
- Center for Studying Disability Policy at Mathematica Policy Research – led by David Stapleton,
- Hunter College – led by Elizabeth Cardoso,
- University of New Hampshire – led by Andrew Houtenville.

The Center is funded by the U.S. Department of Education, National Institute on Disability and Rehabilitation Research (NIDRR), grant no. H133B080012. The contents of the *Annual Disability Statistics Compendium* do not necessarily represent the policies of the U.S. Department of Education and should not be assumed to be an endorsement by the federal government (Edgar, 75.620 (b)).
