**What can I do
today?**

This week it is...paper straws

Wednesday

Pan pipes

- If you blow over the top of a paper straw, it will make a sound. The sound changes depending on the length of the straw.
- Cut straws to different lengths and fix them in a line using two pieces of card.
- Blow to find out what sounds your pan pipes make.
- Does one straw produce a higher pitched sound?
- Introduce your pan pipes in your family band with the homemade instruments you made few weeks ago!
