**What can I do  
today?**

**This week it is...water**

## **Thursday – water wall**

If you have the space available outside, it is good fun to make a water run out of pipes / tubes / bottles:

- You will need some plastic containers that will catch water and allow it to flow out the end or through a hole to the next container down. The containers do not need to all be the same.
- You will need something solid and upright to fix them to. This could be a fence or trellis or a wooden board. You could use ties, nails or string to attach them and make them secure.
- Position the containers so that the water runs down from the top container to the next one below and so on until the water is caught at the bottom in a tray or bucket.
- Pour the water so it runs from one container to the other, you may need to move them to catch the water.
- The water wall could be used as a water station to fill up cars, trucks, watering cans, containers etc.....
