

## We need your help! We want to hear your thoughts on how to improve and support better end of life dementia care

### Who can participate?

**If you have a dementia diagnosis or if you are supporting someone with dementia in a formal or informal capacity**

### What is the project about?

The study is part of a larger project called EMBED-Care (Empowering Better End of life Dementia Care). The purpose of the study is to develop a new palliative care approach for people with dementia which will include an assessment and resources to support decision-making. Palliative care is for incurable conditions, including dementia, focusing on symptom management and a person's quality of life.

### What will you have to do?

We will run up to four workshops over a 6-month period initially. Where possible, we would like to run the workshops face-to-face, but due to COVID-19, it is likely that this will take place using video technology such as Microsoft Teams or Zoom. Each workshop will run up to 2 hours with several breaks and will be recorded.

### Who are we?

We are a group of experts in dementia and palliative care research based at University College London and King's College London.

### Expenses and Payments

If you choose to take part in the study, you will receive a £20 gift voucher for each workshop that you attend as a thank-you for your time. In the case of being able to hold the workshops face-to-face, travel to and from the workshop venue will be reimbursed upon the production of a receipt up to the value of £20.
