

## **WORK FOR US! WE ARE RECRUITING NOW!**

Want to work for a Plymouth based, multi-national company offering competitive salaries, excellent career progression, training and a range of benefits?

With annual sales revenues of \$15 billion from 96 subsidiaries employing 35,000 people around the globe, Kawasaki Heavy Industries is a leader in its fields of engineering and technology.

Established in 1968 the Precision Machinery division of Kawasaki has been at the forefront of hydraulic technology and development for nearly 50 years. Today the Kawasaki brand is synonymous with quality and innovation in hydraulic pumps, motors, valves and complete systems across the whole spectrum of applications.

If you would like to be part of our continuing success, we are recruiting for the following posts:

### **Machine Setter/Operator – multiple vacancies, varying shift patterns available**

The successful candidates will be responsible for setting and operating both conventional and CNC machines to produce precision components for our hydraulic units.

Ideally you will have an engineering background, with experience of setting CNC Machines, be able to read technical drawings, and be familiar with using both metric and imperial measuring equipment.

We are looking for self-motivated individuals, with an eye for detail and good communication skills to join our existing team.

### **Assembler – multiple vacancies, varying shift patterns available**

The successful candidates will be responsible for one or all of the elements of assembling Kawasaki Pumps and Motors to the Customer Standards specified. No experience required, if you are willing to learn, we will train you.

### **Metrology Technician**

The successful candidate will provide resource and support of on-site metrology, calibration, Final Inspection cover, and any other Quality Assurance tasks as required.

You should be able to read engineering drawings, have a working knowledge and experience of using dimensional metrology instruments and equipment, have an eye for detail and be willing to learn.

### **Process Engineer**

The successful candidate will be an integral part of the team and will work on one or more of the Manufacturing Process areas.

You will take responsibility for the performance of specific process operations for all programmes of work that require that process and that a consistent approach is taken across products ensuring that best practice is used, feedback is given and acted upon.
