

# COVID-19 COMMUNITY CHAMPIONS

## Update and key advice

---

[SOUTHAMPTON.GOV.UK/COMMUNITYCHAMPIONS](https://SOUTHAMPTON.GOV.UK/COMMUNITYCHAMPIONS)

---

## COVID-19 confirmed cases

Data up to 03 February

Southampton cases for  
selected dates

12,373

Southampton cases over  
last 7 days

571

Southampton cases over  
previous 7 days

858

Change in last  
7 days

-287

Southampton average cases  
per day (last 7 days)

81.6

There have been **12,373** cases of COVID-19 in Southampton (including both Pillar 1 and 2 cases). There were **571** confirmed cases in the last 7 days which is **a decrease of -287** compared to the previous 7 days.

Data is correct at time of publication, but is subject to change due to reporting delays and corrections. Therefore, any changes in the number of infections should be **interpreted alongside overall trends**, as there will be daily fluctuations. It is more important to consider any sustained **increases** that may occur.

The chart to the right shows the **daily number of confirmed cases** and the **7 day moving average** (to smooth out fluctuations) in Southampton. Recent data suggests COVID-19 infections are continuing to reduce but infection rates are still very high.

Number of COVID-19 cases per day and 7-day rolling average in Southampton for selected dates

Please note: data correct at time of publication, but may be revised in future weeks due to reporting delays

### Infection rate per 100,000 population: H10W Local Authorities

Southampton has a total of **4,899.8** cases per 100,00 population.

The trend in the 7 day rolling average number of cases per 100,000 population is shown in the chart to the left.

In the most recent 7 day period up to **03 February** there were **226.1** cases per 100,000 population, which is **a decrease** compared to the preceding 7 days (**339.8** cases per 100,000 population in 7 day period up to **27 January**).

Weekly infection rates have been calculated using official data published by data.gov. This is calculated on a daily basis using infections data for the last 7 days and 2019 Mid Year Population Estimates.

## COVID-19 related deaths

Includes deaths up to 29 January, all deaths registered up to 6 February

Total COVID related deaths

### COVID-19 deaths

There have been a total of **309** COVID-19 related resident deaths in Southampton. There was **27** COVID-19 related deaths in the most recent week, which is **a reduction of -18** when compared to the previous week.

The chart to the rights shows the number of COVID-19 related deaths by week and setting.

Latest data shows that there was **24 COVID-19** related deaths in **University Hospital Southampton (UHS)** between the 1st February up to 7th February. This data is different from that published by ONS as it doesn't necessarily include Southampton residents, only those who have died at UHS.

### Excess deaths (COVID and non-COVID)

In Southampton, **resident deaths** are now at **higher levels** compared to previous years as shown in the graph to the right. This shows the death occurrence by week compared to the average deaths count, by week, for the years 2015 to 2019.

Deaths by week and place of occurrence

Place of death ● Care home ● Elsewhere ● Home ● Hospice ● Hospital ● Other communal establishment

## How do all the measures work together?

HM Government

**Act like you've got it.**  
Don't accidentally spread coronavirus.

Around 1 in 3 people with COVID-19 don't have any symptoms, but can still pass it on. **And now there is a new strain of the virus which spreads even faster.**

HANDS

FACE

SPACE

# Airborne transmission

**Droplet transmission** occurs when a person is in close contact (within 1 m) with someone who has symptoms and is therefore at risk of having his/her mucosae (mouth and nose) or conjunctiva (eyes) exposed to potentially infective respiratory droplets.

It can also occur through direct contact with infected people and indirect contact with surfaces in the immediate environment or with objects used on the infected person.

**Airborne transmission** is different from droplet transmission as it refers to the presence of microbes within droplet nuclei, which are generally considered to be particles  $<5\mu\text{m}$  in diameter, can remain in the air for long periods of time and be transmitted to others over distances greater than 1 m.

## The difference between droplet and airborne transmission

### Droplet transmission

Coughs and sneezes can spread droplets of saliva and mucus

### Airborne transmission

Tiny particles, possibly produced by talking, are suspended in the air for longer and travel further

BBC

# Ventilation

- Good ventilation reduces the concentration of the virus in the air and therefore reduces the risks from airborne transmission. This happens when people breathe in small particles (aerosols) in the air after someone with the virus has occupied an enclosed area.
- However, ventilation will have little or no impact on droplet or contact transmission routes.
- According to HSE guidance, the important point is that ventilation is used to refresh the air, in the sense that it 'changes' the air in a room with fresh air. This can be done through 'natural ventilation' (opening windows) or mechanical ventilation, such as air con.

Further info and guidance is available here: <https://www.hse.gov.uk/coronavirus/equipment-and-machinery/air-conditioning-and-ventilation.htm> as well as from this SAGE Environment and Modelling report: [https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\\_data/file/945754/S0973\\_Ventilation\\_Actions\\_Summary\\_16122020\\_V2.pdf](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/945754/S0973_Ventilation_Actions_Summary_16122020_V2.pdf)

# Types of ventilation

- Mechanical ventilation brings fresh air into a building and can include air conditioning and/or heating.
- Mechanical systems supplying individual rooms where recirculation modes allow higher rates of supply of fresh air to be provided to an area, should be allowed to operate.
- If you use a centralised ventilation system that circulates air to different rooms, it is recommended that you turn off recirculation and use a fresh air supply.
- Recirculation units (including air conditioning) can mask poor ventilation as they just make an area more comfortable.
- In terms of natural ventilation, lower temperatures and likely windy weather conditions in the winter months will increase the natural ventilation through openings. This means you don't need to open windows and doors as wide, so partially opening them can still provide adequate ventilation while maintaining a comfortable workplace temperature. Opening higher-level windows is likely to generate fewer draughts.
- Airing rooms as frequently as you can will help improve ventilation. This involves opening all doors and windows wide to maximise the ventilation in the room. It may be easier to do this when the room is unoccupied or between uses.

# National 'Lockdown'

---

1

Stay at home (except for specific exemptions)

2

Minimise time spent outside your home and when around other people ensure that you are two metres apart from anyone not in your household or support bubble.

3

You can exercise with the people you live with, your support bubble, or 1 person from another household.

4

Certain venues will close, including non-essential services and schools and colleges.

# Update about Vaccines

<https://www.nhs.uk/conditions/coronavirus-covid-19/coronavirus-vaccination/coronavirus-vaccine/>

You can book your vaccination appointments online if any of the following apply:

- you are aged 70 or over
- you have previously received a letter saying you are at high risk from coronavirus (clinically extremely vulnerable)

You can book appointments at a larger vaccination centre or a pharmacy that provides COVID-19 vaccinations.

You do not need to wait to be contacted by the NHS.

You can do this online, by calling 119 or by getting in touch with your GP.

# Hands-Face-Space

Hands – wash your hands regularly and for 20 seconds

Face – wear a face covering in indoor settings where social distancing may be difficult, and where you will come into contact with people you do not normally meet

Space – stay 2 metres apart from people you do not live with where possible, or 1 metre with extra precautions in place (such as wearing face coverings or increasing ventilation indoors)

# Other updates - NHS COVID-19 App

---

Over 1.7 million app users across England and Wales have been advised to isolate by the NHS COVID-19 app following a close contact with someone who goes on to test positive, new data published today shows.

The app has now been downloaded 21.63 million times, representing 56% of the eligible population aged 16+ with a smartphone and was the second most downloaded free iPhone app on the Apple App Store in 2020.

# How to get medical help

---

## **Use the NHS 111 online coronavirus service if:**

you're worried about your symptoms

you're not sure what to do

Call 111 if you cannot get help online.

Do not go to places like a GP surgery, hospital or pharmacy

## **Babies and children**

Call 111 if you're worried about a baby or child under 5

If your child seems very unwell, is getting worse or you think there's something seriously wrong, call 999

Do not delay getting help if you're worried.  
Trust your instincts
