Storm-Force Winds Possible

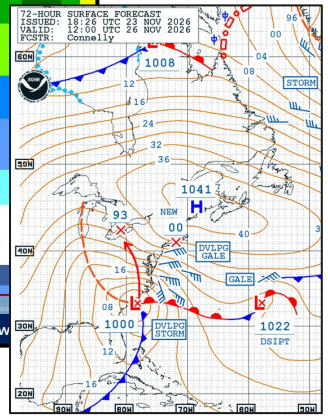

11/25/26 - 11/27/26

November 23, 2026
1900 UTC

KEY MESSAGES:

- A strong area of low pressure is expected to form along the southeast U.S. coast on Wednesday and track to the N-NW on Thursday into Friday.
- Gale-force winds are forecast to rapidly expand N along the east coast Wednesday night into Thursday. **A period of storm-force winds may develop along and to the E of the mid-Atlantic coast on Thursday.**
- Seas will build during this time to greater than 12 ft by Wednesday night, increasing further into Thursday. Additionally, dangerous surf, and coastal flooding are likely along portions of the southeast and mid-Atlantic coasts later this week.
- **Interests along the eastern U.S. coast should monitor the progress of this system. Forecast confidence is low-medium for storm-force conditions developing over the mid-Atlantic waters.**
- Mariners should monitor later forecasts, and prepare for the possibility of avoidance due to strong winds and rough seas.
- Keep abreast of the latest in the tropics and high seas marine weather information at hurricanes.gov and ocean.weather.gov.
- The next briefing update will be issued on Tuesday, November 24 by 12 pm EST or 1700 UTC.
