# Storm Warning

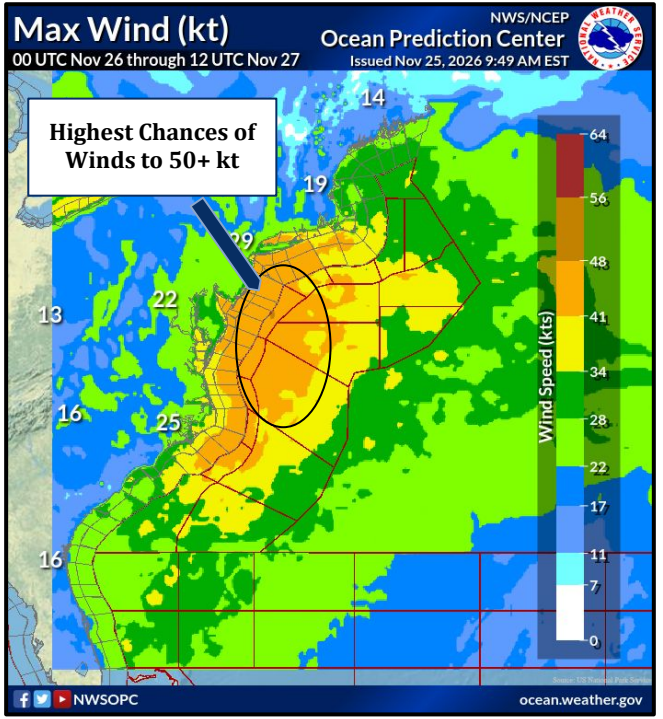

Thursday - Thursday Night (11/26)

November 25, 2026
1500 UTC

***CALL TO ACTION: Vessels planning to be in the area should execute avoidance plans.***

**KEY MESSAGES:**

- Low pressure will gradually broaden and strengthen over the southeast U.S. and off of the southeast U.S. coast today and tonight, moving north through Friday and eventually reaching southeast Canada by Saturday.
- Areas of gales off of the Carolina coast will gradually shift north from later today through Thursday night.
- **Areas of storm-force sustained winds can be expected by Thursday, and continuing into Thursday night, from off of northeast North Carolina and the Virginia Capes north to off of parts of southern Long Island.**
- **Strong thunderstorms can also be expected along a cold front associated with the low late tonight into Thursday night as the cold front moves east.**
- **Mariners should prepare for avoidance now, monitoring later forecasts, and being ready for strong winds and rough seas.**
- Coastal interests should monitor the latest information with respect to dangerous surf and coastal flooding, heeding advice from local officials.

*Maximum Sustained Wind Speed Forecast (kt) Valid 00 UTC November 26 through 12 UTC November 27*

**Outlook: East Coast N of 31N to 65W**

# Storm Warning

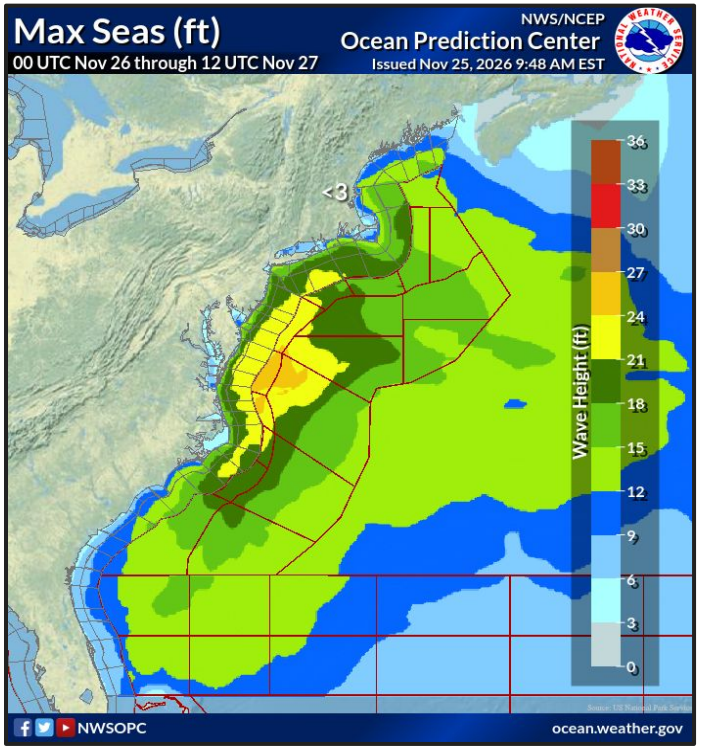

Thursday - Thursday Night (11/26)

November 25, 2026
1500 UTC

***CALL TO ACTION: Vessels planning to be in the area should execute avoidance plans.***

**KEY MESSAGES:**

- 12-foot and greater seas, mainly south of the Virginia Capes early today, will spread north through Thursday as low pressure broadens and moves north.
- Seas are expected to be around 25 feet in and near the strongest sustained winds.
- Winds and seas will be higher in and near thunderstorms.
- Another round of widespread gales will develop by Friday off of the southeast and mid-Atlantic coasts, spreading north to off of northern New England Friday night. Gales will eventually shift well out into the north Atlantic Sunday.
- Widespread 12-foot and greater seas will persist through Friday night, then gradually diminish from west to east, moving well out into the north Atlantic by early Sunday night.
- Keep abreast of the latest in the tropics and high seas marine weather information at hurricanes.gov and ocean.weather.gov.
- The next briefing update will be issued on Thursday, November 26 by 12 pm EST or 1700 UTC.

*Maximum Significant Wave Height Forecast (ft) Valid 00 UTC November 26 through 12 UTC November 27*
