Flooding – New Orleans

Situation

Portions of New Orleans experienced heavy rain on August 5, 2017; coupled with earlier rain, exceeded New Orleans Drainage pumping capacity resulting in flooding of low lying areas. Three of five turbines providing power to drainage pumping stations were offline during the event; a fourth turbine lost power during the event, leaving one turbine powering the system. **The number one turbine has been placed back on line** and currently **103 of 120 pumps are operational**. Showers and thunderstorms remain in the forecast with the 7 day total in excess of 1.5 inches. Estimated restoration to full power capability is mid-September.

Impacts

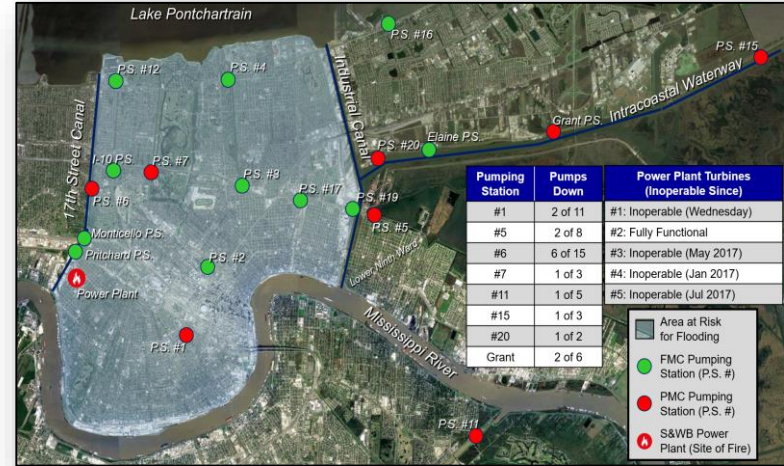

- Drinking water and sewage services not affected
- Current estimates of pumping capability are one half inch per hour (normal pumping capacity is about one inch first hour and one half inch per hour after)

State / Local Response

- Governor and Mayor declared a State of Emergency
- New Orleans contracted 14 two Megawatt generators; additional smaller generators are also being procured; **26 of 26 requested generators received, installed, and anticipated operational on Monday, August 14**
- USACE Prime Power arrived and is assisting with generator installation
- **LA EOC returned to Normal Operations**

FEMA Response

- Region VI remains at Steady State; LNO has been identified
- No requests for FEMA assistance at this time
