Please Prevent F.O.G. Pollution

Fats, Oils, and Grease

Please keep fats, oils, and grease (F.O.G.) out of drains at home and at work. F.O.G. can harden and build up in pipes, causing blockages in the sewer lines and in-home plumbing. This leads to sewer overflows and costly repairs. Here's what to do instead of pouring F.O.G. down your drain:

Use cans and jars with lids to pour cooled, leftover oils and grease

Scrape pots and pans to remove fats, oils, and grease before washing

Put fatty and greasy food scraps and the containers with leftover oils and fats into the garbage for disposal

Pour liquid oils and greases into cat litter and dispose of in the garbage

The Grand Canyon Water Utility thanks you for your cooperation!
