

Bosnia and Herzegovina

Powdered PVC

A home center and hardware company in the Brcko District of Bosnia-Herzegovina is seeking to locate additional suppliers for the following product that is used in the manufacture of PVC profiles (doors/windows):

Current Product: PVC Powder – PVC-ONGROVILL S-5167 tariff number 39041000 ([TECHNICAL DATA SHEET](#))

In 2019 they purchased around \$1.7 million from the U.S. and they are seeking to find a supplier that could provide between 5,000 - 6,000 tons of this material.

The U.S. should be among the lowest cost producers in the world because of our use of shale gas to produce the product, so U.S. manufacturers of this product should be cost competitive on a global scale.
