

WHAT THEY'RE SAYING

Read statements from leaders across government and industry on the [US Tech Force](#) (Tech Force), a government-wide initiative led by the Office of Personnel Management (OPM) to bring top engineers, data scientists, and technology leaders into public service.

As a critical component of President Donald Trump's directive to build a more effective and accountable government, Tech Force surges elite technical teams to tackle the federal government's most complex, large-scale challenges. In partnership with leading technology companies, participants receive world-class technical training and work alongside senior managers sourced directly from industry, strengthening the federal workforce and helping agencies deliver on the president's vision for modern, result-driven government.

Government Leadership

"The US Tech Force is not just about innovation – it's America's command to lead the future, through this force, we'll accelerate AI adoption across government, strengthen our institutions and deliver better outcomes for the American people. This administration is putting America first, keeping America strong and winning like never before. Interior is proud to be on the frontlines of this change." – **Secretary Doug Burgum, US Department of the Interior**

"The US Tech Force advances President Trump's vision to harness the power of AI within the federal government to better serve the American people. As the Department of Labor leads its own efforts to equip American workers with the skills they need for an AI-driven economy, the US Tech Force demonstrates the federal government putting those same principles into practice by ensuring our own workforce has the talent to secure our nation's position as the global leader in AI." – **Secretary Lori Chavez-DeRemer, US Department of Labor**

"One of the core deliverables in the MAHA Strategy Report is deploying AI across HHS to accelerate President Trump's directive to Make America Healthy Again. The launch of the US Tech Force moves us decisively toward that goal. It strengthens this government with the engineers, data scientists, and innovators we need to modernize our systems,

fortify our public health defenses, and ensure that the benefits of AI reach every American family.” – Secretary Robert F. Kennedy, Jr., US Department of Health and Human Services

“Bringing world-class technical talent into government is essential — and amid the AI boom sweeping the globe, it’s more important than ever. President Trump’s AI Action Plan makes clear that America’s leadership depends on our ability to recruit the best of the best; people with the knowledge and skill to modernize federal systems from the inside out. The US Tech Force puts that directive into action. By empowering technologists to work directly on our most mission-critical challenges, we are accelerating the President’s agenda and ensuring that the federal government keeps pace with the breakthroughs transforming the private sector.” – Deputy Secretary Jim O’Neill, US Department of Health and Human Services

“CMS is proud to partner with the USTF to improve health outcomes by better utilizing technology solutions. By accelerating AI adoption, we can eliminate waste and fraud, make prior authorization instantaneous, and finally ‘kill the clipboard’—freeing doctors to focus on caring for patients, not paperwork. That means better outcomes for the 40% of Americans who rely on CMS programs and better value for taxpayers. If that mission inspires you, bring your tech expertise to CMS and help transform American health care.” – Administrator Mehmet Oz, Centers for Medicare & Medicaid Services

“Recruiting the right talent is vital to putting American interests first. The Tech Force gives us the surge capacity we need to bring in top US tech experts who can immediately support the Department’s highest-priority missions.” – Under Secretary for Management Jason S. Evans, US Department of State

"The War Department will become an AI-first enterprise. We’re calling on passionate, visionary technologists to join a tour of duty and seize this new frontier of AI innovation to ensure America leads the way in this race. We need top talent to move quickly in tackling the most high-stakes challenges in warfighting and intelligence—problems found nowhere else. With the right personnel, we will maintain global AI dominance and forge the most efficient and lethal fighting force in the world.” – Under Secretary for Research and Engineering Emil Michael, US Department of War

“This is a clarion call. If you want to help your country lead in the age of AI, we need you. The US Tech Force offers the chance to build and lead projects of national importance, while creating powerful career opportunities in both public service and the

private sector. I am grateful to President Trump for prioritizing America's leadership in AI and empowering a cross-government effort to close our nation's AI talent gaps." – **Director Scott Kupor, Office of Personnel Management**

"America's economic and national security will increasingly rely upon technology leadership that is being driven by America's entrepreneurs. Thanks to President Trump's vision, the U.S. Tech Force will speed our nation's ability to prudently leverage AI at every level from small businesses to the federal government. By recognizing - not targeting - the promise of the private sector's advances, the federal government will enable America to set the standard for AI, and the SBA is proud to support this effort." – **Administrator Kelly Loeffler, US Small Business Administration**

"The over 330 million Americans with Social Security Numbers should have the best technology and innovators working on their behalf. Deploying AI and engaging private sector partners will give taxpayers the world-class service and excellence they deserve. I am grateful for President Trump's leadership on AI and the cross-government collaboration that will bring every federal agency into a New Golden Age." – **Commissioner Frank Bisignano, US Social Security Administration**

"GSA is proud to partner with OPM and the Trump Administration to answer the president's call to fast-track AI adoption across the federal government. The US Tech Force will be a true force multiplier, creating a pathway to bring in top private-sector talent to help drive a new era of American AI leadership inside the federal government and deliver for the American taxpayers." – **Commissioner Josh Gruenbaum, Federal Acquisition Service, US General Services Administration**

"The US Tech Force is America's elite corps for the AI revolution, mobilizing the nation's best minds to lead on digital frontlines, defend our global edge and secure our future in technological leadership. It is a call to service for our nation's best technologists to join a mission-critical corps that will ensure our competitiveness, modernize our government infrastructure and lead the world in innovation from education to medicine." – **Gregory Barbaccia, US Federal Chief Information Officer**

Tech Industry Leadership

"The US Tech Force is a major step forward to encourage a steady flow of tech talent between the private and public sectors. As the world's most comprehensive and broadly adopted cloud, AWS is home to the world's top technologists. We are proud to partner

with OPM to provide the opportunity for these professionals to become public servants, helping to accelerate the modernization of government systems, strengthen national capabilities, and deliver better outcomes for citizens. Sharing elite tech talent is yet another way that Amazon is helping to advance American AI leadership.” – Dave Levy, Vice President of Worldwide Public Sector at Amazon Web Services

“Box is proud to support the US Tech Force and we’re excited for the Force’s AI-first vision to help equip the next-generation workforce with essential skills and hands-on training. As AI continues to evolve at an incredible pace, collaboration across the public and private sectors will be key to accelerating learning, mentorship, and secure innovation that helps every organization harness its potential.” – Aaron Levie, Co-Founder and CEO of Box

“America’s continued leadership in technology and AI depends on bold action and collaboration. The US Tech Force is a powerful step toward closing the talent gap and accelerating innovation in government through public-private partnerships. At Dell Technologies, we’re proud to support this mission to ensure our nation remains at the forefront of technology for generations to come.” – Michael Dell, Chairman and CEO of Dell Technologies

“AI has the potential to fundamentally transform how government operates and serves the American people. We commend the administration for launching the US Tech Force to put the nation’s best and brightest to work leading this transformation. By making the federal government an example of how AI can strengthen our economy and improve services for citizens, this initiative can demonstrate the power of public-private collaboration to deliver secure, responsible innovation for our country.” – Arvind Krishna, Chairman and CEO of IBM

“We support President Trump’s efforts to keep America at the cutting edge of AI and we’re excited to lend our expertise through the Tech Force. It’s important the Government uses everything at its disposal to make sure American AI is helping to deliver valuable public services for Americans.” – Joel Kaplan, Chief Global Affairs Officer at Meta

“The US Tech Force is about bringing top technical talent into public service and giving them modern tools to deliver for the American people. OpenAI is proud to support

efforts that help public servants work faster, smarter, and more effectively on the challenges that matter most.” - Joseph Larson, VP, head of Government, OpenAI

“We’re proud to support training efforts to cultivate the next generation of technical leaders, ensuring the US remains at the forefront of innovation and the responsible adoption of AI.” – Vlad Tenev, Chairman and CEO of Robinhood Markets, Inc.

“SAP is honored to partner with the US government through the US Tech Force initiative to help strengthen America’s technology workforce. By placing talented engineers and experienced leaders across federal agencies, this program advances the President’s vision for US leadership in artificial intelligence and digital modernization, ensuring the US government is equipped to serve the American people with innovation, efficiency, and purpose.” – Christian Klein, CEO of SAP

“The US Tech Force recognizes a simple truth: AI leadership depends on empowered talent working with high-quality data. Snowflake is honored to partner on this effort to bring world-class technologists into government and give them the tools to modernize critical systems. We’re committed to helping federal agencies harness AI in a secure, scalable way that delivers real impact for the public.” – Sridhar Ramaswamy, CEO of Snowflake Computing

“We are honored to be among the first private sector partners in the US Tech Force and appreciate President Trump’s commitment to advancing America’s leadership in AI. With AI embedded at every layer of our products, Oracle empowers organizations to transform and reshape how work is accomplished, modernize operations, and unlock new value from enterprise data.” – Kim Lynch, Executive Vice President of Oracle Government, Defense & Intelligence

“Salesforce is proud to partner with OPM to bring together top private sector technical talent to help tackle the government’s most critical issues. The United States Tech Force will accelerate AI adoption and modernization across agencies. The benefits of this partnership will be felt by the millions of American citizens who interact with more efficient, effective, and responsive government services.” – Kendall Collins, President and CEO of Government Cloud at Salesforce

"Workday is proud to be a strategic partner to the US Tech Force, an initiative redefining how government recruits and develops talent for the AI era. By building a modern, skills-based pipeline, the US Tech Force is laying the foundation for meaningful national impact, and Workday is committed to helping accelerate that mission." –

Carl Eschenbach, CEO of Workday

"Artificial intelligence represents one of the greatest opportunities of our time to strengthen America's leadership in the future of work. As AI continues to transform how work gets done, it's essential that the United States lead with innovation, responsibility, and collaboration between the public and private sectors. We support the federal government's cross-agency initiative to develop a highly skilled AI workforce to modernize the US government and continue to position the United States as a global AI leader. We're proud to partner in this critical effort as we enter the next era of AI-driven innovation." – **Eric S. Yuan, Founder and CEO of Zoom**
