

Virtual consultations

Now available

For a free, confidential virtual consultation call (703) 538-2872

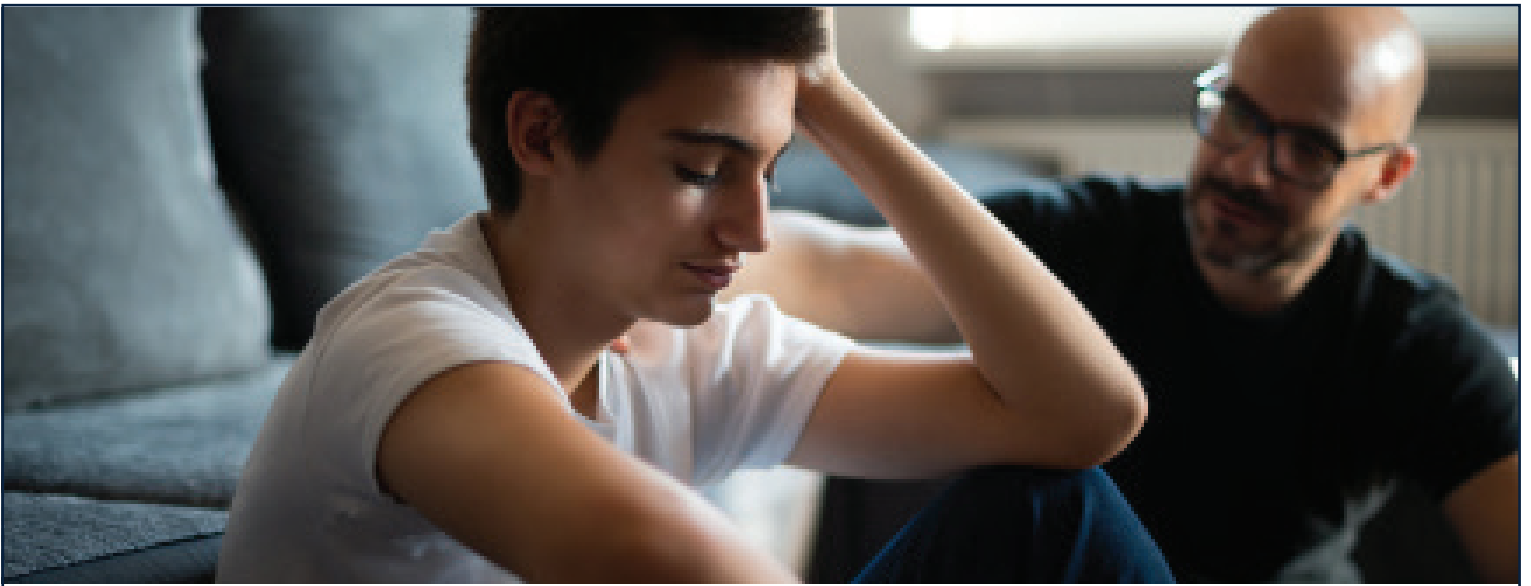

Dominion Hospital is available 24/7 for support through confidential virtual consultations or phone consultations to determine an individual's level of care.

Patients and families can bypass the additional delay and potential cost of an Emergency Room or Community Services Board visit, and pursue a direct admission as necessary.

1. Call **(703) 538-2872** to speak to one of our assessment counselors, who are available 24 hours a day, seven days a week
2. If a virtual consultation is needed, you will be sent an email with a link to join the assessment counselor, who will then facilitate the virtual consult.
3. Our experienced assessment counselor will assess the individuals presenting symptoms and behaviors, and determine the intensity of services that are considered necessary to alleviate such symptoms of clinical severity.
4. Pertinent clinical information will be obtained from the individual, family member, and/or the professional referral service.
5. After the consultation, an ultimate decision for admission will be made by the on-call physician.
6. The assessment counselor may acquire insurance information from the individual if authorization for admission is warranted.
7. Individuals who are determined to be non-acute, may be subsequently scheduled for PHP or IOP admission. If necessary, an order for admission to an inpatient level of care will be obtained, and the patient may be transported straight to the hospital for immediate admission.
8. If the individual requires services unavailable at Dominion Hospital, the assessment counselor will provide the individual with referrals to physicians, agencies, or programs that might satisfy the individual's needs.

Take the first step

Dominion Hospital, the only freestanding mental health care facility in Northern Virginia, leads the region in short-term mental health services for children age 5-12, adolescents age 13-17, and adults age 18 and older. Our interdisciplinary team specializes in mental health disorders, treatment options, and corresponding levels of care.
