

Our mission is to create a pathway for underserved high school females to reach their potential through STEM education, internships, and leadership development training.

The Leading Ladies Initiative provides students between 10th -12th grades an opportunity to break the barriers of women entering the STEM industry through a work-based learning program. During the program students will experience first-hand how STEM is applied in various careers, and gain an understanding of how both high school course selection and college preparedness equips you for a STEM career.

By the numbers

88%

of our participants are first generation

95%

of our participants had no previous internship experience

12

different high schools have been represented from across Loudoun County and the Washington DC metro region.

100%

of our graduates have pursued college degrees

70%

of our graduates are studying STEM fields in college and 4 graduates earned full ride scholarships.
