

## Morning Case Update

11/21/2020 08:11

*COVID-19 surveillance data are dynamically stored in the Washington Disease Reporting System (WDRS). The data are updated when new information about a case is entered, such as exposure information, change in address, lab data from diagnostic and routine tests, date of death, case information from medical providers, or information from other jurisdictions indicating a person has moved out of Washington. Given the dynamic nature of COVID-19 surveillance data, data reported in the past may not match data reported in present time.*

*The data in this report is reflective of all cases received as of 11:59 PM 11/20/2020.*

*For questions, please contact [COVIDData.IMT@doh.wa.gov](mailto:COVIDData.IMT@doh.wa.gov) or call 206-418-5500.*

### Notice:

- On 10/22/2020, we added a table that shows antigen-positive case counts by county. Antigen-positive cases are defined as an individual with a positive antigen test in the absence of a positive PCR test. Confirmed cases are individuals with a positive PCR test. **Hospitalization, death, and testing data are based on PCR results.**
- On 8/25/2020, we added updated testing data reflecting tests rather than individuals. The updated method is applied to the entire time frame covered in the dashboards.

**Death counts are no longer updated over the weekend. All death numbers are as reported Friday.**

---

### Summary

**Total Confirmed (PCR-positive) Cases: 141267**

**Total Hospitalizations Among Confirmed (PCR-positive) Cases: 9730**

**Total Deaths Among Confirmed (PCR-positive) Cases: 2617**

## Reported PCR Testing Data by County

The following table shows the number of newly reported positive and negative PCR tests for each county and the state for the most recent reporting day in addition to the 7 day average number of reported daily PCR tests. Note that the following data are for the most recent reporting day which is not what we publish on the dashboards. We publish PCR testing data by specimen collection date which is more biologically meaningful, but has a lag time and is only 90% complete by 10 days after the specimen collection date.

County	7 Day Average New Tests	Total New Tests	New Positive Tests	New Negative Tests	Percent Positive

### Antigen-Positive Total and 7 Day Case Counts by County

The following table shows the total and newly reported number of antigen-positive COVID-19 cases in Washington State, by county. An antigen-positive COVID-19 case is defined as an individual with a positive antigen test in the absence of a positive PCR test. The earliest specimen collection date for an antigen positive case was 2020-06-15 and this table includes antigen-positive cases through 2020-11-20. The number of new antigen-positive cases is the total number of antigen-positive cases with a specimen collection date in the past seven days (2020-11-14 to 2020-11-20).

## Hospitalizations to Reconcile

This table displays the WDRS IDs of individuals in which a hospitalization has been identified through linkage to RHINO records, but whose hospitalization status in WDRS is still “No.” DOH will review and evaluate these records to determine if the hospitalizations linked to these cases appear to be COVID-related hospitalizations. WDRS will be updated at 11:30am on weekdays based on our findings. Please reach out to [syndromic-surveillance@doh.wa.gov](mailto:syndromic-surveillance@doh.wa.gov) if you have concerns.
