

Training Infection Prevention through Simulation Virtual Course

January 21st - February 25th
Tuesdays, 10 am PST (1 pm EST)

The course will consist of 6 weekly, 1.5-hour live virtual sessions, along with asynchronous content and participation. The virtual course will include:

- A framework and time during class to work on your own IPC educational offering - all IPC topics are welcome, but we encourage you to consider vaccine-related topics
- Introduction to simulation and gamification
- Content around adult learning principles
- Instruction about course development and action planning
- Exclusive content available on Mighty Network
- Continuing Education Credits

New to this iteration of the virtual course, we will have a focus on education around vaccines, and will introduce a new module that provides level-setting and examples of gamified learning for vaccine safety and efficacy. We're excited to share our new module with you!

This course is open to anyone who is interested, on a space available basis. There is no cost to participants.

To sign up, go to: bit.ly/UWTIPSSignup. If you are interested in learning more, or would like to speak with someone about the virtual course, please email: uwtips@uw.edu.

For information please email uwtips@uw.edu.

This work is being conducted by the University of Washington with funding from CDC/Project Firstline.
